1 About this manual and getting started

1.1 Who this manual is for

This is the **User Manual** for NIWE ERP. It is for everyone who uses the system day to day: cashiers, sales staff, store keepers, accountants, HR officers, front-desk and booking staff, managers and owners. It explains **what you do** in each part of the system, step by step, using the words you see on screen.

You do not need to read it from start to finish. Read *Getting started* (this chapter), then the chapter or chapters for your own work. The last page of each chapter lists the **reports** for that module.

Setting up the system (users, licences, printers, backups) is covered in the separate **Administrator Manual**. If you are a cashier, accountant or store keeper, the one-page **Quick-start card** for your role is the fastest way to start.

> **Note:** You only see the parts of the system your business has switched on and that your job needs. If a menu in this manual is missing on your screen, your business may not use that module, or your role may not include it. Ask your administrator.

1.2 Signing in

1. Open the system address in your browser (Chrome or Edge is recommended). The home page shows a **Staff Login** button, and, if your business has switched them on, tiles for public pages such as booking or help requests.
2. Press **Staff Login** and enter your **Username** and **Password**.
3. After signing in you land on the screen that suits your role: cashiers on the registers list, managers on the dashboard, and so on.

If you forget your password, press **Forgot password?** on the sign-in screen. A link is e-mailed to the address on your profile. If you have no e-mail address on your profile, ask an administrator to set a new password for you.

> **Warning:** Never share your password or PIN. Everything you do is recorded under your name in the audit log.

1.3 Your profile

Open **My profile** from the menu to:

- Change your **Full name** and **Email**. Your e-mail is needed to use *Forgot password?*.
- **Change password**: enter your **Current password**, a **New password** and **Confirm new password**.
- **Change PIN**: your PIN (4 to 6 digits) identifies you at the sales terminal and when you approve something at the till. It must be different from every other active staff member's PIN.

1.4 Appearance

Appearance (under your settings) lets you choose **Light**, **Dark** or your own colours (a page background and an accent colour). The choice is saved for your account and follows you to any device. Printed receipts, purchase orders and reports always stay white so that they print cleanly.

1.5 Language

Use the language selector on the top bar (or on the sign-in page) to switch between **English** and **Français**. Your choice is kept on this browser and wins over the business default. If you have not chosen, you see the language your business set (Chad businesses start in French). Every module's screens, messages and report headings are translated; printed documents (PDFs), e-mails and most messages from the server are written in your **business** language (Settings > System settings), not in the language you picked on your own screen, so that a customer gets a document in the language of the business. A few messages that carry a status word can still show that word in English.

1.6 Finding your way around

- The **menu on the left** is grouped by module (POS, Sales, Customers, Inventory, Accounting, and so on). Click a group to open it. On a phone, open the menu with the menu button at the top.
- Most lists have a **search box**, **filters** and **quick views** at the top, paging at the bottom, and **Excel, PDF and CSV** export buttons that export exactly what is filtered on screen.
- Most records follow a path: *Draft* (you can still change it), then confirmed or issued, then paid or completed. Mistakes after that are corrected by a **void**, a **credit note** or a **return**, not by deleting, so that the books stay honest.
- Where a button is greyed out or missing, you either do not have the permission or the record is in a state that does not allow it.

1.7 Approvals (manager PIN)

Some actions need a second person: a large discount, a void, a return after many days, a hand-changed price, a big cash paid-out, an expense above a limit. When this happens the screen asks for a **Manager PIN**, or says that an approver is needed. A manager types their own PIN on your screen; their name is recorded as the approver. You never need to know their PIN.

1.8 My HR (for every employee)

If your login is linked to an employee record, **My HR** shows your **payslips**, **leave balance**, **attendance** and documents, and lets you **Clock in** and **Clock out**, **Request leave** (choose the type, the dates, whether the first or last day is a half day, and a reason), and update your own **contact details** (phone, e-mail, address, emergency contact). Your bank account, tax number and job details can only be changed by HR. If you see "Your login isn't linked to an employee record", ask HR to link it.

1.9 Dashboard

Managers and accountants with access see the **Dashboard**, which summarises sales, stock and money owed and has a **Needs your attention** section: overdue invoices, low stock, pending approvals and similar items that need action.

1.10 Tips that apply everywhere

- **Type to search** in any picker (customer, product, supplier) instead of scrolling.
- **Export** buttons give you the same list you are looking at, filtered the same way.
- **Print and PDF** buttons are on documents such as invoices, quotations, purchase orders and statements.
- **Attachments**: many records let you attach files or photos; use them for proof (a signed delivery note, a supplier's invoice).
- If something looks wrong, do not delete and re-enter. Ask a manager how to correct it, and keep the reference number.

2 POS: registers, the sales terminal and shifts

The **POS** (point of sale) group is where cashiers sell, count the till and handle returns. Its menu has: **Registers & Terminal, Shifts, Voids & returns, Cash movements, POS settings, Devices, Reports**.

2.1 How a day at the till works

1. A manager or admin **opens a session (shift)** on a register and assigns it to a cashier, with an **opening cash float**.
2. The cashier opens the **terminal** with their **PIN** and rings up sales. Payments are taken at **Checkout**.
3. During the shift: cash **paid in or out**, **drops into the safe**, returns, and X reports as needed.
4. At the end the shift is **closed**: the drawer is counted and the difference is recorded. A **Z report** is printed.

A **register** is the physical till. A **session** (or **shift**) is one working period on a register. One shift can have several **cashiers**, each with their own PIN and their own carts.

2.2 Opening a session

Go to **POS > Registers & Terminal**. The list shows each register's **Name, Location, Warehouse, Float, Cashiers, Device** and **Status** (*Switched off*, *Open session*, *Closed*).

1. Press **Open session** on the register.
2. In **Assign to**, choose the staff member who will work the till.
3. Enter the **Opening cash float**. (The most the till may open with is shown.)
4. Press **Open till**.

If a register is tied to one PC, a note shows *Works on … only* and *Go to terminal* is available only on that PC.

2.3 Opening the terminal

Press **Go to terminal** on the open session. The terminal asks for your **PIN** first: type it and press Enter. A wrong PIN leaves the PIN screen up. If you do not have a PIN, ask an admin to set one, or set your own in **My profile**.

> **Note:** Your PIN opens *your own* working session on the shift. Another cashier can use the same terminal by pressing **Switch cashier** and typing their PIN; carts are kept separate.

2.4 Selling at the terminal

2.4.1 Adding items

- **Scan a barcode** into the barcode box (type it and press Enter), or tap a **product tile**, or **search by name or SKU**. The category tiles filter the product tiles. "Showing the first 200 matches" means: type more to narrow the search.
- Each line shows **Item, Qty, Discount, Price**. Use the pencil to change quantity, the bin to remove a line. For serial-numbered goods the terminal asks for the **Serial no(s)**. Quantities may be decimal where the product allows it (for example 2.5).
- The cart shows **Subtotal**, **Tax**, any **Discount on the sale** and the **Total**.

2.4.2 Customer

Use the customer box to **search by name or phone**, or press **Add** to create one on the spot (name, phone, e-mail, **Tax ID**), which selects them for this sale. The box shows if the customer **Owes** money, their **available credit**, and their **loyalty points** and what the points are worth.

2.4.3 Discounts

- **% Discount** gives a discount on the sale: choose **Percent** or **Amount**, enter it and a **Reason**.
- A cashier can give a discount only up to the limit in POS settings. A bigger one needs a manager's PIN (the **Manager PIN** box). A reason is required when POS settings say so.
- **Promotions** (such as buy-X-get-Y) apply automatically and the cart shows *Saved with promotions*. Type a **Coupon code** and press **Apply** for coupons.
- If your price differs from the product's price, the line shows *Price changed*. A manager may need to approve, and prices below cost may be refused.

2.4.4 Several carts: hold and discard

- **+** starts another cart tab. **Hold** parks the cart with a note and opens a new one. **Discard** cancels an open cart outright (stock is untouched).

2.4.5 Payment (checkout)

Press **Payment**. On **Checkout** choose how the customer pays. Tap a payment method to enter an amount; you can **split the payment across several methods**.

- **Gift card**: type the **Gift card code**, press **Check balance**, then **Use on this sale**.
- **Loyalty points**: shows the points available and what they are worth; enter the **Points** and press **Use points**. Points can be used only when the amount reaches the minimum.
- **Store credit** (credit sale): select a customer first. The customer must be enabled for credit (set on the customer record) and within their limit. You may set a **Due date**; otherwise the customer's own payment term is used.
- **Charge to room** (hotels): choose the guest who is checked in and the **Room**.

Press the final button to complete the sale. The receipt prints. Change due is shown for cash.

2.4.6 Receipts and reprints

Receipts shows this shift's completed sales (Time, Invoice, Customer, Total, Payment) with **View / Reprint**. The first print is the original; each later print is marked **COPY 1, COPY 2…** and is listed in **Voids & returns**.

2.4.7 Gift cards at the till

Gift card lets you **Check / add money** (type the code and press **Check**, see the balance and expiry, then **Add money**) or **Sell a new card** (amount, how it was paid, who it is for), and gives you the code to hand over.

2.4.8 Customer display

Customer display opens a second window for the customer showing the cart and total, then *Thank you*. Drag it to the customer-facing screen.

2.4.9 Offline mode

If the connection drops, the terminal shows **Offline** and keeps working from the catalogue of the last sync. Sales you ring up are **queued** on the PC (**Offline queue**) and sync automatically when the connection returns. Credit limits and some checks are applied only when the sale syncs; a sale that cannot be accepted appears as *Failed* in the queue for review, where you can **Discard** it or ask a manager.

> **Warning:** Do not clear the browser's data or close the browser while sales are waiting in the offline queue.

2.4.10 Other terminal buttons

Cash (cash control), **X report**, **Open drawer**, **Devices** (printer set-up), **Switch cashier**, **End my session** (ends *your* session on the shift and discards carts you never checked out) and **Exit**.

2.5 Cash during the shift

Press **Cash** to open the cash drawer screen. It shows **Opening float, Cash sales, Cash refunds, Paid in, Paid out, Dropped into the safe** and **Cash that should be in the drawer**.

- **Record** a movement: choose the kind (*paid in*, *paid out*, *drop into the safe*), the **Amount**, and **What was it for?** A paid-out above the limit needs a **Manager's PIN**. If the drawer holds more than the reminder level, you are told to drop some cash into the safe.
- **Count the drawer without closing the shift** gives a spot check: nothing moves, and the difference is kept on record.
- A mistaken movement can be **voided** (a manager may be needed). Voided movements stay visible.

The page also has buttons for the **X report** and **Z report**, and **Close the shift**.

2.6 X and Z reports

- **X report**: a mid-shift snapshot of sales, payments, returns and cash. Run it as often as you like; it changes nothing.
- **Z report**: the closing report, numbered. It is printed when the shift is closed.

Both print to the receipt printer if one is set up.

2.7 Closing a session

1. Record any cash paid in, paid out or dropped, **before counting**.
2. Open the close screen. It shows **Opening float, Cash sales, Cash refunds, Paid in, Paid out, Dropped into the safe** and **Expected cash in drawer**, plus **Non-cash sales (card/mobile/bank)** and **Total sales this session**.
3. **Count the drawer** by notes and coins (enter the number of each denomination, or use **+ Another value**). The system totals it.
4. If the count differs from the expected cash by more than the allowed amount, a note is required: **Why is the count off?**
5. Press **Close session**, then print the **Z report**.

Admins can **Force close** a shift or **Close all sessions** from **POS > Shifts** if a cashier has left without closing.

2.8 Voids and returns

2.8.1 Returning goods

Use **Process a return**: type the **Invoice number** (for example the number on the receipt) and press **Find**. Choose the lines and **Return qty** (or **Return all items**), the **Refund method** and the **Reason**. Returns of old sales (older than the limit in POS settings), or refunds above a limit, need a **Manager's PIN**. Press **Process return**; a return receipt prints.

2.8.2 Voiding a sale

A sale can be voided only while its shift is open (after that it is a return). Voiding needs a manager's sign-in or PIN, and usually a reason.

2.8.3 The log

POS > Voids & returns lists every void, return, discount, price change and receipt reprint: When, What, Reference, Customer, Register, By, Amount, Reason and **Approved by**. Use the search box and the register filter. This is where managers look when a till is short.

2.9 Shifts list (supervisors)

POS > Shifts lists shifts with **Register, Z, Cashier, Opened, Closed, Status, Sales, Variance**, with filters for register and date, and buttons for **Cash**, **X report** and **Z report**. Expand a shift to see its **Cashiers** and add or end cashier sessions.

2.10 Cash movements list

POS > Cash movements lists every paid-in, paid-out and safe drop (When, Register, What, Reason, Amount, By, Approved by), including voided ones.

2.11 Devices

POS > Devices sets up the receipt printer, kitchen and bar printers, the cash drawer and the customer display **for this PC**. Settings are kept in the browser of that PC. Your administrator normally does this once (see the Administrator Manual, chapter 8). Use **Print test page** and **Open cash drawer** to check.

2.12 Reports

POS > Reports has these reports, each with filters and export to Excel, PDF and CSV:

- **Sales and transactions**: Total POS Categories Sales, Total POS Brands Sales, Total POS Products Sales, POS Shifts Sales, Detailed POS Shifts Transactions.
- **Profit**: POS Shifts Profit, Total POS Categories Profit, Total POS Brands Profit, Total POS Products Profit.

- **Operations**: POS Sales by Cashier, POS Sales by Hour, POS Sales by Payment Method, **POS Exceptions** (voids, returns, discounts, price changes, reprints) and POS Shift Comparison.
- **Credit**: Credit Sale Report, Daily Credit Collection Report, Outstanding Credit Report, Overdue Credit Report.

> **Tip:** Managers should read **POS Exceptions** and **POS Shift Comparison** weekly. They show unusual voids, discounts and cash differences by cashier.

3 Sales

The **Sales** group (back-office selling, as opposed to the till) has: **Quotations, Sale orders, Price lists, Customer groups, Sale order returns, Invoices, Recurring invoices, Credit notes, Reports, Settings**. Promotions, gift cards and loyalty (switched on in **Sales > Settings**) have their own pages.

3.1 The selling path

For business-to-business or on-account selling the usual path is:

Quotation (an offer) → **Sale order** (the customer has agreed) → **Fulfil** (deliver the goods) → **Invoice** (ask for payment) → **Record payment**.

You can start at any step: an invoice can be raised without a quotation or order.

3.2 Quotations

A quotation is an offer with a validity date. It does not move stock or accounting.

1. **Sales > Quotations > New**.
2. Choose the **Customer** (or press **+ New customer** to add one: name, phone, e-mail, Tax ID).
3. Optionally set **Valid until**, **Branch** (if you have several), and **Notes**.
4. Optionally set a **Discount (whole quotation)** as a **Percentage** or **Fixed amount** (this field appears only when your administrator set discounts to *Global*; in *Per line* mode each line has its own **Discount %**).
5. Under **Line items**, search a product by name, SKU or code. The list shows stock and price. Set **Quantity** and **Unit price**. **+ New product** adds a quick product (name, unit price, description) that you complete later.
6. Check the totals (**Subtotal, Tax, Discount, Grand total**) and press **Save draft**.

On the quotation, buttons follow its status: **Edit**, **Send to customer** (e-mails the PDF, status *Sent*), **Mark accepted**, **Mark expired**, **Reject**, and **Convert to sale order**. Statuses: *Draft*, *Sent*, *Accepted*, *Rejected*, *Expired*.

> **Tip:** If the customer belongs to a *customer group*, the group's price list is used for the prices automatically.

3.3 Sale orders

A sale order records what the customer has agreed to buy. It reserves nothing until you fulfil it.

1. **Sales > Sale orders > New** (or **Convert to sale order** on a quotation). The form is the same as a quotation, with **Expected date**.
2. **Save draft**. Press **Confirm** when it is agreed. A confirmed order cannot be freely edited; use **Cancel order** if it will not go ahead.
3. **Fulfil order**: choose **Fulfil from** (the warehouse or location), enter **Fulfilling now** for each line (the remaining quantity is shown), enter **Serial numbers delivered** if the product is serial-tracked (otherwise the oldest in stock is used), and press **Record fulfillment**. Stock goes down. Partly delivered orders are *Partially fulfilled*; when everything is delivered it is *Fulfilled*. You can print a **delivery note**.
4. **Generate invoice** creates the invoice for the order; **View invoice** opens it.

The order page shows **Paid**, **Outstanding**, **Returned** and **Refund due to customer**.

3.3.1 Returns on a sale order

Process a return lets you choose what the customer is returning (**Returning now**), where to put the stock back (**Return stock to**) and a **Reason**. The return appears under **Return history** and in **Sales > Sale order returns**. A **Refund due** amount is created if the order was already paid.

3.4 Invoices

Sales > Invoices lists all invoices (search by invoice number, customer or sale order; filter by status, date and branch).

- **New invoice**: same form as an order, plus **Due date**. Press **Save draft**.
- A **Draft** can still be edited or deleted (**Delete draft**). Press **Issue invoice** to make it official: it gets its number, posts to accounting, reduces stock if not already fulfilled, and may be e-mailed to the customer and to the invoice-receiver list set in Sales settings.
- **Record payment**: enter the **Payment amount** (up to the outstanding), the **Payment method** and an optional **Note**. Part-payments are normal. **Payment history for this invoice** shows each receipt. **Record another payment** for further instalments.
- **Pay in instalments** (if the Installments module is on) turns an unpaid invoice into a payment plan.
- Mistakes after issuing: **Void invoice** (give a reason; nothing has been paid) or **Cancel & credit invoice** (when payments exist: you choose to **Refund** by a method or move the money to **Customer credit**). Both create a **credit note**.

Statuses: *Draft*, *Issued*, *Partially paid*, *Paid*, *Void*, *Cancelled*.

3.5 Credit notes

Sales > Credit notes lists credit notes (Credit note #, Invoice #, Customer, Voided, Reason, Amount) with **View invoice** and **Print**. A credit note is issued automatically when an invoice is voided or cancelled; you do not create one by hand.

3.6 Recurring invoices

For regular billing (a monthly retainer, rent, service fees).

1. **Sales > Recurring invoices > New**.
2. Give it a **Name**, the **Customer**, the **Frequency** (*Weekly*, *Monthly*, *Quarterly*, *Yearly*), the **Next run date**, and **Due in days**.
3. Add the lines; the **Grand total (each cycle)** is shown.
4. Tick **Active** and save.

A daily job generates the next invoice on or after the next run date, then moves the date forward one cycle. Untick **Active** to pause.

3.7 Price lists and customer groups

- **Price lists** hold special prices. A list can set a price for individual products (even a lower price for bigger quantities) and move every other product up or down by a percentage (**Adjust all other products by (%)**: -10 means 10% below normal). It can be limited by **Valid from / Valid to** and switched on or off.
- **Customer groups** put customers in a group and give the group a price list. At the till, and on invoices, quotations and sale orders, those customers then get the list's prices. Use **Add customers** on the group to assign members.
- A price you type by hand is never replaced by a price list.

3.8 Promotions and coupons

Sales > Promotions (when switched on). Press **New promotion**:

- **What it does**: *Percent off*, *Amount off*, or *Buy some, get some free* (for example buy 2 get 1 free, repeating).
- **It applies to**: *One product*, *A category* or *The whole cart*.
- Optional: **Needs at least this spend**, **Valid from/to**, **Coupon code** (with a code the promotion works only when the cashier types it), **Customer group**, and limits on total uses and uses per customer.
- The list shows each promotion's **Used** count; **Sales** lists the sales that used it.

The till works out promotions by itself: each line gets the one best promotion for its product or category, then the one best whole-cart promotion comes off what is left, after any discount the cashier typed. Promotions apply at the till, not on invoices, quotations or sale orders.

3.9 Gift cards

Sales > Gift cards (when switched on). **Sell a gift card**: the **Amount**, **Paid by** (or *Given free*), **Bought by**, **For**, **Expires on** and a **Card code** (made for you if empty).

> **Note:** Money paid for a gift card is **not sales yet**. The shop owes it back as goods, shown as **Owed on gift cards**. It becomes sales when the card is spent at the till.

On the list you can see a card's **History**, **Add money**, change its **Expiry**, **Block** or **Unblock** it. Filters: *Can be spent now*, *Money left*, *Empty*, *Blocked*, *Expired*. **Release expired balances** moves expired, unspent balances from "owed" into income.

3.10 Loyalty points

Sales > Loyalty (when switched on). A named customer earns points on every sale (the walk-in customer does not). Points can pay part of a later sale at the till.

Rules (set by a manager): spend per point, points earned, what **one point is worth**, the **fewest points that can be spent at once**, and the maximum percentage of a sale that points can pay. Open a customer from the list to see their **History** or to **Add or take away points** (use a minus to take away) with a **Reason**.

3.11 Sales settings

Admin only: switch **Promotions, Gift cards, Loyalty points** on or off and set the **Invoice receiver emails**.

3.12 Reports

Sales > Reports: Sales Orders, Sales by Customer, Sales by Product, Sales by Category, Invoices, Credit Notes, Sale Order Returns, Customer Payments, **Receivables Aging**. Each has date and other filters and exports to Excel, PDF and CSV.

4 Customers

The **Customers** group has: **Customer statement, Customer payments, Collections**. The customer list itself is under **Customers** (the list of people and companies you sell to).

4.1 Adding and editing a customer

Customers > New (or the **Add** button at the till for a quick one). Fields:

- **Name**, **Phone**, **Email**, **Tax ID** (needed for tax invoices to businesses).
- **Customer group (price list)**: *None (normal prices)* or a group (see the Sales chapter).
- **Allow this customer to buy on credit**: store credit. **Only an administrator can change this.** When on, set the **Credit limit** and the **Default payment term (days)**; leave the term blank for no default due date.

The customer page shows **Credit enabled / Credit off** and buttons **Edit, Invoices, Payments, Statement, Record payment**.

> **Note:** Customers are never deleted if they have history. Untick or deactivate instead. Merge duplicates by asking an administrator.

4.2 Credit sales and limits

A customer with credit enabled may buy on account at the till or on an invoice, up to the **Credit limit**. The terminal shows **Owes ...** and **available credit** next to the customer. A sale that would go over the limit is refused (offline sales are checked when they sync).

4.3 Recording a customer payment

From the customer page press **Record payment**, or from an invoice use **Record payment**.

1. Enter the **Payment amount** and **Payment method**.
2. Optionally add a **Note**.
3. The payment is applied to the customer's oldest unpaid items first, unless you are paying a specific invoice.

Customers > Customer payments lists all payments (Type, Receipt #, Customer, Date, Amount, Method, Recorded by, Note, Applied to), with **View details**. Switch on **Show every customer's payments** to see everyone's.

4.4 Customer statement

Customers > Customer statement: choose the **Customer** and the **From** and **To** dates. The statement lists every invoice (Invoice, Date, Register, Cashier, Items, Subtotal, Tax, Grand total, Payment, Credit, Due date, **Outstanding**) with totals. **Export Excel** or **Export PDF**, or e-mail it from Collections.

4.5 Collections (who owes you money)

Customers > Collections is the credit controller's daily screen.

- At the top: **Customers owe ...** in total and how much of it is **overdue**, split by **How late**: *Not yet due*, *1 to 30 days*, *31 to 60 days*, *61 to 90 days*, *Over 90 days*. Click an amount to list the items behind it.
- Three tabs: **By customer**, **Unpaid items**, **Reminders sent**.
- Filters: search by customer, phone or number; **Overdue only**; **All branches**.
- **Send reminder**: tick the customers to remind and press **Send reminder to ... chosen**. Each customer gets one e-mail listing everything overdue, with their statement attached. Or use the **PDF** and **E-mail** buttons on a single row.
- **Automatic reminders** can be switched on by the administrator.
- **Export** buttons give Excel, PDF and CSV.

Counted here: issued invoices and till sales made on credit that are not paid in full. An item with no due date falls due after the customer's default payment term (or immediately if there is none).

> **Warning:** E-mail must be set up (Administrator Manual, chapter 9) for reminders and statements to be sent. The page tells you if it is not.

4.6 Reports

Customer-related reports are in **Sales > Reports**: Sales by Customer, Customer Payments, Receivables Aging; and in **POS > Reports** (Credit): Credit Sale Report, Daily Credit Collection Report, Outstanding Credit Report, Overdue Credit Report.

5 Purchases and suppliers

The **Purchases** group covers buying: **Purchase requisitions, Purchase orders, Bills, Purchase returns, Reports**. **Suppliers** has the supplier list, **Supplier prices**, **Supplier payments** and the **Supplier statement**.

5.1 The buying path

Requisition (a request to buy, optional) → **Purchase order** (sent to the supplier) → **Receipt** (goods arrive, stock goes up) → **Bill** (what you owe) → **Supplier payment**.

5.2 Suppliers

Suppliers > New supplier: **Name, Contact person, Phone, Email, Tax ID** (VAT or tax registration number), **Address**, **Notes**, and **Active** (selectable on a new purchase order). Untick *Active* for a supplier you no longer use; do not delete a supplier with history.

You can also add a supplier on the spot from a purchase order with **+ New supplier**.

5.2.1 Supplier prices

Supplier prices records agreed costs: **Supplier, Product, Unit cost, Valid from, Valid to, Note**. When you add that product to a purchase order for that supplier the agreed cost is suggested.

5.3 Purchase requisitions

A requisition asks for something to be bought, and goes to someone who may approve it.

1. **Purchase requisitions > New**: add **Notes**, then search products and set **Quantity requested** (with an optional note per line).
2. **Save draft**, then submit it for approval.
3. A person with the *Approve purchase requisitions* right approves or rejects it. An approved requisition can be turned into a purchase order.

> **Tip:** The **Reorder** screen (Inventory) can create a requisition from every product that is low on stock, in one click.

5.4 Purchase orders

1. **Purchase orders > New**. Choose the **Supplier**, **Expected date** and, if you have several warehouses, **Receive into warehouse**. (Received stock lands in that warehouse's *Receiving* location; move it to a *Sales* location with a stock transfer.)
2. Add lines: search a product, set **Quantity**, **Unit cost** (and **Discount %** or a whole-order **Discount**). The form can be **pre-filled with low-stock items** when you come from Reorder.
3. **Save draft**. On the order, press **Send to supplier** (e-mails the order) or **Print**. Use **Edit** while it is still a draft, and **Cancel order** if it will not go ahead.

5.4.1 Recording a receipt (goods arrive)

On the order, **Record a receipt**:

- For each line enter **Receiving now** (the remaining quantity is shown). Partial deliveries are fine.
- For batch or serial products enter the **Batch / lot no.** and expiry, or the **Serial numbers** (one per line or comma-separated).
- **Landed cost for this delivery (optional)**: freight, duty, clearing. It is spread over the delivered products by value and added to their cost and to Inventory in the books. Record freight here, **not** as a separate expense, or it would be counted twice. Tick *Already paid* if you paid it at once; otherwise it is recorded as owed.
- Press **Record receipt**. Stock goes up. When all lines are fully received, the order is complete and a bill is generated.
- You can print a **goods received note (GRN)** for the delivery.

5.4.2 Returning goods to a supplier

On the order press **Process a return**: choose the product, **Returning now** and a **Reason**. The order shows **Returned** and **Refund due from supplier**. All returns are listed in **Purchase returns**.

5.5 Bills

A **bill** is the supplier's invoice to you. It is generated once an order is fully received, or manually from the order.

- **Bills** lists them: Bill #, Purchase order, Supplier, Date, Status, Total, **Outstanding**.
- A draft bill can be edited; press **Issue bill** to make it official (it then posts to accounting). Use **Delete draft** to remove an unissued one.
- **Record payment** from the bill or from the supplier page. **Void bill** (with a reason) if it was wrong.

5.6 Supplier payments

Suppliers > Record payment (or from a bill):

1. Enter the **Payment amount** and optional **Note**.
2. The screen lists the supplier's unpaid orders and bills (Order / Bill #, Date, Total cost, Outstanding). Press **Suggest oldest-first**, or type an amount in **Allocate** for each. The allocated total must equal the payment amount.
3. Save. **Print receipt** gives a Supplier Payment Receipt showing what it was applied to and the **Remaining balance**.

Supplier payments lists all payments, with **Payment history**.

5.7 Supplier statement

Suppliers > Supplier statement: choose a supplier and dates to see what you bought, what you paid and the balance. Export to Excel or PDF.

5.8 Reports

Purchases > Reports: Purchase Orders, Outstanding Payables Report, Purchases by Supplier, Purchases by Product, Purchases by Category, Bills, Purchase Returns, Supplier Payments, **Payables Aging**. All filter by date and export to Excel, PDF and CSV.

6 Inventory

The **Inventory** group has: **Products, Categories, Brands, Stock adjustments, Stock counts, Reorder, Branches, Warehouses, Stock transfers, Packaging rules, Breakdown stock, Reports, Inventory settings**.

6.1 Products

Inventory > Products > New product. The important fields:

Field	Meaning
Name, SKU, Barcode, Code	How the product is identified. The *Code* is an optional second identifier and must be unique if used. Use **Print label** to print barcode labels.
Icon, Description	A picture for the till and the default text for invoice lines.
Category, Brand, Tax rate	Category and brand for reports; *Tax rate* of *None (tax-exempt)* or one of your rates.
Unit price	The selling price.
Cost price	What the product costs you. Never shown to customers; used for profit reports. Follows purchases automatically depending on the costing method.
EFRIS commodity code	Only if you submit to EFRIS.
This is a service, not a physical good	For services and made-to-order items.
Track stock for this product	Untick for a service; it can always be sold and selling it never changes stock.
Stock quantity	Current stock. After the start, change stock with adjustments, counts, receipts or transfers, not by editing here.
Reorder level, Maximum stock level	When sellable stock plus open purchase orders falls to the reorder level the product appears in **Reorder**; the suggested order quantity brings stock up to the maximum (default: twice the reorder level).
Batch / serial tracking	*None*, *Batches with expiry date* (sold earliest-expiry first), or *Serial numbers* (one per unit). Batch and serial numbers are entered when you receive a purchase order or add stock by adjustment.

The product page has **Stock movement history**, which lists every movement of the product and where it came from.

> **Tip:** Import many products at once with **Settings > Backup & Data > Bulk import** (ask your administrator). Always press **Check file** first.

6.1.1 Variants

For products that come in sizes or colours, open **Variants**: add **Options** (for example *Size*) with **Values** (S, M, L), press **Generate**, and one product is created for each combination (copying price, cost, category, brand and tax).

The original becomes an inactive template and must hold no stock. Edit each variant's SKU, barcode and price afterwards.

6.1.2 Labels

Print label from a product, or from the product list for many products, prints barcode labels on your printer.

6.2 Categories and brands

Categories and **Brands** group products for the till tiles, reports and promotions. Create a brand before choosing it on a product.

6.3 Stock adjustments

Use an adjustment to correct stock outside a normal purchase or sale (damage, theft, expiry, a recount).

1. **Stock adjustments > New**. Search the **Product**; the current stock is shown.
2. Choose the **Location** (default: main warehouse sales stock) and enter the **Quantity change**: positive to add, negative to remove. The new stock level is shown.
3. For batch products enter the batch and expiry; removing takes the earliest expiry first. For serial products list the serial numbers.
4. Choose the **Reason**: *Damage*, *Theft*, *Expiry*, *Recount*, *Other*, and add a **Note**.
5. **Save adjustment**.

> **Note:** The adjustment is only *logged for review*. Stock and accounting do not change until someone with the *Approve stock adjustments* right confirms it from the Stock adjustments list. Rejected adjustments change nothing.

6.4 Stock counts

A stock count compares the shelf with the system.

1. **Stock counts > Start a stock count**: choose the **Warehouse**, optionally a **Category**, and add notes. **Start count** freezes the current system quantities onto a **count sheet**.
2. **Print sheet** and count. Sales and receipts can carry on while you count.
3. Enter **Counted** for each line (the sheet shows **System qty, Counted, Variance, Value**). Use **Add a product to the sheet** for something found that was not listed. **Save counts**.
4. **Submit for approval**. An approver presses **Approve & post differences**: only the *difference* between what you counted and the frozen figure is posted, so anything moved meanwhile is preserved. Use **Reopen for counting** to send it back or **Cancel count** to abandon.

6.5 Reorder

Inventory > Reorder lists products whose sellable stock plus open purchase orders is at or below the reorder level (SKU, Product, Category, On hand, On order, Reorder level, Max, Order qty). Press **Create requisition** to turn the list (or ticked lines) into a purchase requisition. Your administrator can also have a draft requisition created automatically every day.

6.6 Warehouses, locations and transfers

- **Branches** and **Warehouses** are set up by an administrator (Administrator Manual, chapter 5). A warehouse may have *Receiving*, *Sales*, *Storage* and *Damaged* locations. Damaged stock is tracked but never counted as sellable.
- **Stock transfers > New**: choose the **Product**, **From location**, **To location** (the same warehouse or another) and **Quantity**. The transfer is logged; stock moves only when someone with the *Approve stock transfers* right presses **Confirm** (or **Reject**). **Inter-branch** transfers are then received at the other end: the receiving branch presses **Receive** and enters what actually arrived (any shortfall is shown as *short*), or **Return to sender** with a note (for example *damaged*). A **transfer note** (the *Paper* column) can be printed to travel with the goods.
- After a purchase receipt, goods sit in the *Receiving* location until a transfer moves them to a *Sales* location. If a register sells from a particular location, that is where the stock must be.

6.7 Packaging and breakdown

For selling parts of a product (a bottle in shots, a case in bottles). An administrator must switch on *Product packaging & breakdown* in Inventory settings.

- **Packaging rules > New**: choose the **Parent product** (what gets broken down) and the **Child product** (what it becomes; **+ New product** creates it on the spot), and **Units per parent** (25 shots per bottle).
- **Breakdown stock**: choose the **Packaging rule**, the **Quantity** to break down and the **Location**, optionally a note, and run it. The parent stock goes down, the child stock goes up, and the child's cost per unit is worked out. The table lists every previous breakdown.

6.8 Negative stock and multi-warehouse

Whether the till and adjustments may take stock below zero, and whether the business uses several warehouses, are set by an administrator in Inventory settings. If a sale is refused for stock, receive or adjust stock first.

6.9 Reports

Inventory > Reports: **Stock On Hand & Valuation**, **Stock Aging**, **Dead Stock** (no sales in 90 days), **Batch Stock** (lots and expiry), **Expiring Stock** (60 days), **Serial Number Register**, **Stock Movement History** (for one product).

7 Restaurant

The **Restaurant** group has: **Voids & comps, Sales analysis, End of day, Reports, Tables, Menu, Settings**, and the working screens reached from the **floor plan**: *All orders*, *Takeaway/Delivery*, *Deliveries board*, *Kitchen display*, *Reservations*, *Receipts*, *Wastage*, *Reports*.

7.1 A service day at a glance

1. Waiters open the **floor plan**, tap a table and **open an order**.
2. They add menu items, note allergies, and **Send to kitchen**. The kitchen prepares on the **Kitchen display**.
3. When guests ask for the bill, the waiter prints the **Bill**, takes payment at **Checkout** (cash, card, split, or charged to a hotel room).
4. At closing time a manager runs **End of day** (the cash-up).

7.2 Setting up the menu and tables (manager)

Tables > New table: **Name** (Table 1), **Section** (Main Hall), **Capacity**, **Active**. A table can be marked *Out of service* and *Available* again.

Menu: create **Categories**, then add products to each category. For each item set:

- **Station** (for example *Grill* or *Bar*; used to route kitchen tickets), **Course** (starter, main, dessert), **Prep (min)**.
- **Allergens** and **Choices** (sizes, cooking, extras: each option can add to the price; a group can be *Must choose* or *Up to n*).
- **Menu price**. A **recipe** (from Manufacturing > Bill of materials) makes the system deduct ingredients from stock when the dish is sold.

7.3 Taking an order

On the **floor plan**, tap a free table, enter the number of **Guests** and press **Open order**. The order screen shows the menu on the left and the order on the right.

- Tap a menu item to add it. Items with choices open a window to pick options. Add a **Note for the kitchen** (quick-note buttons such as *No onions* are set in Restaurant settings).
- Assign **Seat** and **Course** to each line so the bill can be split by seat and courses can be fired in turn. Items for a later course wait **on hold** until you press **Fire course**.
- **Allergies**: record the guests' allergies; the kitchen ticket shows ALLERGY warnings and items that contain them.
- **Send to kitchen** prints or shows tickets for each station. The line changes to *sent*.
- Before sending, a line can be removed. After it has gone to the kitchen, taking it off needs a **manager's approval** and a **reason** (**Void it**). **Give free** (comp) needs a reason. **Send back** records a remake.

7.3.1 Takeaway, delivery and room service

New order (floor plan): choose **Takeaway**, **Delivery** or **Room service**. Enter the customer name and phone; delivery needs an **address**; room service needs the **guest's room** (a guest must be checked in). Then **Open order**. The **Deliveries board** lists deliveries with **Driver**, **Out for delivery** and **Mark delivered**.

7.3.2 Online orders and QR codes

If the public ordering page is on, guests order at your `/order` page (takeaway/delivery) or scan the **table QR code** and send an order that staff **accept** under **Online orders**. Set **Delivery areas** (fee, minimum order, extra minutes) and print the **table QR codes** under *Delivery areas & QR codes*. A new code replaces and cancels the old one.

7.4 Moving, merging and splitting

- **Move table**: move a whole bill to a free table.
- **Merge into**: merge this order into another open table's order.
- **Split / move items**: move selected lines to a new check at the same table (by seat, or one by one) so that guests pay separately.

7.5 The bill and payment

The order shows **Subtotal, Discounts given, Service charge, Tax, Rounding, Total, Tip, Reservation deposit already paid** and **Balance due**.

1. **Bill** prints the guest's bill (marked "not a receipt").
2. **Discount**: a percent or amount on the whole bill with a **Reason**. A discount above the waiter limit, or waiving the service charge, needs a manager.
3. **Checkout**: add payments with **+ Add payment**: choose the method and amount, or use **Custom amount**, **Split equally**, **Split by item** or **Split into guests' shares**. Choose a **Tip** (quick percent buttons or **No tip**). **Charge to which room?** puts it on a hotel guest's account.
4. The screen shows **Change to give back**. A deposit already paid is taken off.
5. Complete the payment. The receipt prints; the table is freed.

Cancel order frees the table without a sale; if part has gone to the kitchen, a reason and a manager's approval are required.

7.6 Kitchen display and expo

- **Kitchen display**: tickets by status *waiting*, *cooking*, *ready*. Buttons: **Start preparing**, **Mark ready**, **Mark served**, **Bump all for this order**, **Remake**. Tickets turn amber then red as time runs out. **Sold out (86)** lets the kitchen mark an item as unavailable, with a reason.
- **Expo**: the pass. Shows each order with what is complete; **Mark everything ready**, **Serve**, **Remake**.

7.7 Reservations and the waiting list

- **Reservations > New reservation**: guest name, phone, e-mail (for reminders), **Party size**, **Date & time**, **Minutes at table**, optional **Table**, and a **Deposit** that can be taken now with a payment method. The screen lists **Free times that day**.
- Actions on a reservation: **Seat**, **Change**, **Take deposit**, **Remind**, **No-show**, **Cancel**. **Mark overdue bookings as no-shows** does them in one click. **Seat by reservation number** works when the guest shows their code.
- **Waiting list**: **Add a party** (name, phone, party size, quoted wait, note). When a table is free the list says *Table ready*; **Seat** them or mark *Left*.
- If the public page `/reserve` is on, guests reserve online and the list shows *booked online*.

7.8 Wastage

Wastage > Record wastage: choose the **Product**, **Quantity wasted** (a positive number), **Reason** (*Spoilage*, *Burnt / overcooked*, *Dropped / spilled*, *Expired*, *Prep trim*, *Customer complaint*, *Other*) and a note. The entry is logged; someone with the *Confirm restaurant wastage* right confirms or rejects it. Only then stock and accounts change.

7.9 Voids and comps

Voids & comps is the log of every void, comp and cancelled order: When, Kind, Table / customer, Item, Qty, Value, Reason, By, Approved by. Managers review it for unusual patterns.

7.10 End of day

End of day is the closing cash-up of the business day.

1. Settle or cancel any orders still open: the screen lists them and will not close until they are cleared.
2. Review **Sales** (checks, covers, gross, discounts, net, service charge, tax, rounding, total billed, tips), **How it was paid**, **By order type**, **Tips by server**, booking **deposits** and **Voids, comps and cancelled orders**.
3. In **Cash in the drawer** the screen works out *opening float + cash sales + deposits in - deposits refunded + paid in - paid out - tips paid out = should be in drawer*. Enter the **Counted** amount; the **Difference** shows, then **Left in drawer** and **Banked**. Add a note.
4. **Close the day**. It becomes a numbered **Z** report that you can **Print**, or export to Excel, PDF or CSV.

If something is paid after the day is closed, **Reopen the day** (give a reason) and close it again.

7.11 Sales analysis

Sales analysis shows, for a period: net sales, checks, covers, average check, per cover, margin, tips and time at the table; sales **by hour, weekday, order type, how guests paid, by day, by category**, and the **Menu mix**: *Star* (sells well and earns well, protect it), *Plowhorse* (sells well, earns little: raise the price or use a cheaper recipe), *Puzzle* (earns well, sells little: promote it) and *Dog* (sells little and earns little: rework or drop).

7.12 Receipts

Receipts lists paid bills with **View / Print**. A reprint is marked COPY and never opens the cash drawer.

7.13 Settings

An administrator sets **service charge** by order type, waiter discount limit, tips, quick kitchen notes, kitchen timing, rounding and table bookings (Administrator Manual, chapter 7).

7.14 Reports

Restaurant > Reports: Sales by Order Type, Orders (all types), Menu Item Sales, Menu Category Sales, Menu Item Profit, Menu Category Profit, Sales by Server, Cancelled Orders and Wastage, with Excel, PDF and CSV export.

8 Hotel

The **Hotel** group has: **Front desk, Bookings, Reservation chart, Housekeeping, Maintenance, Guests, Guest register, Rooms, Room types, Rates, Company accounts, Groups, Online booking, Reports, Settings**.

> **Note:** A hotel is set up once by an administrator in this order: **room types** (name and nightly rate), then **rooms**, then **Settings** (how room revenue reaches accounting, tax, check-in and check-out times, fee policy). Once the Hotel module is on, a **Charge to room** payment method is available in the POS and the Restaurant.

8.1 The front desk

Hotel > Front desk is the receptionist's home screen. It shows **Occupied, Occupancy %, Free tonight, Arrivals due, Departures due, To clean** and **Out of order**, then three lists: **Arrivals, In-house, Departures** (Booking, Guest, Room, Stay, Balance). A star marks VIP guests and a flag marks blacklisted guests. Buttons: **New booking** and **Walk-in** (a guest arriving without a booking).

8.2 Making a booking

Bookings > New booking (or **Walk-in** on the front desk):

1. **Guest**: choose an **Existing guest** (search by name, phone or ID number) or enter a **New guest** (full name, phone, e-mail, ID number).
2. **Stay**: **Arrival**, **Departure**, **Room type**, **Adults**, **Children**. Choose a **Room**, or *Assign later*. If none is free the screen says so.
3. **Rate plan**: *Standard rate* or a plan such as Corporate. The screen shows the price for each night, the total before tax, the tax, and the total with tax.
4. **Source**: where the booking came from (phone, website, agent), used in reports.
5. Optionally **Agree a different price with the guest** (a nightly rate before tax), add **Notes** and a **Deposit** (amount and how it was paid).
6. Save.

8.3 Working with a booking

Open a booking to see the guest, room, stay, rate per night, deposit and **Bills**. Buttons change with the booking's status (*Booked*, *Checked in*, *Checked out*, *No-show*, *Cancelled*):

- **Check in**: choose the **Room**. You may check in even if the room is not marked clean (tick the option).
- **Edit**, **Move room**, **Change departure**.
- **+ Charge** adds an extra (minibar, laundry, service) to the guest's bill. **Pay fee owed** takes payment of a cancellation or no-show fee.
- **Check out**: closes the bill, takes payment, and posts the invoice.
- **No-show** and **Cancel booking** apply the fee policy set in Hotel settings; the front desk can waive any fee.
- Documents: **Print invoice**, **Bill (PDF)**, **Registration card**, **Confirmation**, **E-mail confirmation**.

8.3.1 Split bills and billing a company

A stay has one bill by default. **+ Split bill / bill a company** adds another bill (for example *Extras*, *Company*, *Spouse*). Choose who each bill is **Billed to**: the guest, a company with credit enabled, or the group. A company must first be set up for credit under **Customers**. **Room nights here** moves the room charges to a particular bill.

8.4 Reservation chart

Reservation chart shows rooms down the side and days across (two weeks, with « and » buttons to move). Green bars are in-house guests, amber are bookings; each bar runs from the arrival day up to, but not including, the departure day. Rooms out of order are marked. Use it to see gaps and move bookings.

8.5 Housekeeping

Housekeeping lists rooms with their status: **Dirty, Cleaning, Clean, Inspected**, plus *Occupied*, *DND* (do not disturb), *Vacant* and *Out of order*. Housekeepers press **Start cleaning**, **Clean**; a supervisor marks **Inspected**. Check-in expects a clean room. Housekeeping also has boards for supplies and for **lost and found** items.

8.6 Maintenance

Maintenance logs room problems. Enter the **Room**, the **Problem** (for example *Air conditioner not cooling*), the **Priority** (*Low*, *Normal*, *High*, *Urgent*) and details. Tick **Take the room out of service until fixed** and set **Out of service from** / **Back in service on**. With dates, only those nights are blocked; with no dates the room is blocked right away until the request is **Done**. If existing bookings fall inside the blocked dates the screen warns you; move those guests or change dates. Buttons: **Start**, **Done**, **Reopen**, **Delete**.

8.7 Guests and the guest register

- **Guests** lists guests. Open a guest to see **Stays, Lifetime spend, Average per stay, Last stay, Usually books via**, and **ID documents** (passport, national ID, driving licence, visa; upload scans). Mark a guest **VIP** or **Blacklisted**.
- **Merge a duplicate into** combines two records of the same person: all bookings, groups, lost-and-found items and ID documents move over and the other record is removed. **This cannot be undone.**
- **Guest register** is the official arrivals-and-departures register, with export, for authorities that require it.

8.8 Rooms, room types and rates (set-up)

- **Room types**: name and nightly rate (the standard price).
- **Rooms**: room number, type, floor and status.
- **Rates**: **Seasonal rules** change a room type's price for a date range and optionally certain weekdays (a fixed price, a percentage change, or an amount added/taken off; **Min nights**; **Priority**: the rule with the highest priority wins). **Rate plans** give a discount on top (percent or amount). The **Price calendar** shows the resulting one-night price per day. Existing bookings keep their price.

8.9 Company accounts

Company accounts lists stays billed to a company at check-out: **Company, Billed, Received, Owing, Overdue, Open bills**. Open a company, **Show bills**, and when it pays use **Receive money**: **Amount, Method, Reference** (cheque or transfer number), **Date**. Overdue bills are highlighted.

8.10 Groups

For weddings, conferences and tours. **Groups > New**: **Group name**, **Arrival**, **Departure**, **Contact person**, phone, e-mail, **Who pays** (*Each guest pays their own bill*; *The group pays the rooms, guests pay extras*; *The group pays everything*) and an invoice-to customer.

- **Room blocks**: hold rooms off general sale (**Room type, Rooms, Group rate / night, From, To**, and a **Release unbooked rooms on** date; unbooked rooms go back on sale then, or **Release now**).
- **Add rooms** for the group, then **Rooming list**: paste guest names, one per line, with **Put names on rooms**. Export the rooming list to Excel, PDF or CSV.
- **Statement** shows what the group owes. **Confirm**, **Complete** or **Cancel group** (cancels every room that has not arrived; you can waive cancellation fees).

8.11 Online booking

If the hotel's public booking page is on, guests choose room types and dates and book online. Bookings arrive in **Bookings** with source *Website*. An administrator sets the page's text and rules under **Online booking**.

8.12 Night audit

At the **night audit time** set in Hotel settings, the system posts each night's room charge to accounting. The **Night audit** report checks the hotel's cash, revenue, tax, deposits, city ledger and group ledger against Accounting, and is the manager's end-of-day check.

8.13 Reports

Hotel > Reports: the **Daily** report; **Occupancy** with **Room nights sold, Room nights available, Room revenue, ADR** (average daily rate) and **RevPAR** (revenue per available room); **Revenue by booking source**; **Forecast and pick-up**; and the **Night audit**. Choose *Last 7 days*, *Last 30 days* or *This month*, or enter dates. All export to Excel, PDF and CSV.

9 Manufacturing

The **Manufacturing** group has: **Bill of materials, Production plans, Manufacturing orders, Workstations, Routings, Indirect costs, Reports**.

9.1 How production works

A **bill of materials (BOM)** is the recipe for one finished product. A **manufacturing order** says "make this many". When you **record production**, the components are taken out of stock, the finished goods are added to stock, and the cost of making them is worked out from materials, labour, machine time and indirect costs.

9.2 Set-up (once)

9.2.1 Workstations

Workstations > New: a **Code** (cannot change later), **Name**, **Description**, and an **Hourly rate**: the operating cost of that machine or work area per hour.

9.2.2 Routings

A routing lists the steps (operations) to make a product. **Routings > New**: **Name**, **Description**, then **+ Add operation** for each step: **Seq** (order), **Operation name** (for example Cut, Assemble, Paint, Pack), **Workstation**, **Est. minutes/unit** and **Labour rate / hour**. At least one operation is needed.

9.2.3 Indirect costs

Overheads such as rent share and power. **Indirect costs > New**: **Code**, **Name**, **Allocation method** and **Rate**:

- *Flat*: a fixed total spread over the order's runs in proportion to quantity.
- *Per unit produced*: the rate for every unit produced.
- *Percent of material cost*: a percentage of each run's material cost.

9.2.4 Bill of materials

Bill of materials > New:

1. **Finished-good product**: the product this BOM makes (cannot be changed after creation).
2. Optionally a **Name** (for example *Standard*, *Alt*, *no walnut*; a product can have several BOMs) and a **Routing**.
3. **Components**: search a product and set **Quantity per unit**: how many of that component it takes to make exactly **one** unit of the finished good.
4. The screen shows the **Cost of one unit (today's prices)**: *Components*, *Labour*, *Machines*, *Cost per unit*, *After by-products*, *Selling price*, *Margin*. Indirect costs are added per order and are not included here. Save to refresh after editing.
5. **By-products** (optional): bran, offcuts, whey. Each good unit also puts the stated quantity of the by-product into stock, and a **Share of the cost (%)** is taken off the finished good's unit cost.
6. Tick **Active** and **Save**.

9.3 Production plans

Production plans suggest what to make. A plan looks at **sales** and **low stock** and lists, for each product, the **Bill of materials**, the quantities **From sales** and **From low stock**, the **Suggested qty** and any **Component shortfalls**. Press **Generate order** on a line to open **Generate manufacturing order**: confirm **Quantity**, optional **Scheduled date** and indirect costs, and press **Create manufacturing order**.

9.4 Manufacturing orders

9.4.1 Create

Manufacturing orders > New: choose the **Bill of materials**, the **Planned quantity**, an optional **Scheduled date**, **Produce at** (the location where components are consumed and finished goods added), a **Note**, and any **Indirect costs to apply**. Orders are numbered *MO-0001*, *MO-0002*…

9.4.2 Confirm

An order starts as a draft. **Confirm** fixes the recipe, indirect costs and location; afterwards only the planned quantity, date and note can change. **Copy as new draft** repeats an order. **Cancel order** abandons it. **Print job card** gives the shop floor a sheet with the steps.

9.4.3 See what you need

The order shows **Components for the … still to make**: *Per unit*, *Needed*, *On hand*, *Short by*. It tells you if stock is short ("Negative stock is allowed, so production will still go through" if your business allows it).

9.4.4 Record production

Press **Record production**:

- **Quantity to produce now** (the remaining quantity is shown). **Use what stock allows** fills in the most you can make today.
- **Scrapped / rejected units** and a **Reason** (burnt, wrong size, failed check).
- Optionally the **Actual quantity used** of components (otherwise the recipe's quantity is used) and **Actual minutes taken**.

You can record production in several runs. Each run moves stock and posts the cost. The order shows **Produced, Scrapped, Yield %, Total material / overhead / labour / machine cost, Total cost, By-product credit** and **Unit cost**, compared with the **Planned cost**.

9.5 Reports

Manufacturing > Reports: **Production runs, Cost per product, Component use against recipe, Workstation time and cost, Scrap and rejects, Orders: plan against actual.** Export to Excel, PDF and CSV. *Component use against recipe* and *Orders: plan against actual* show where waste and overruns happen.

10 Accounting

Accounting is the ledger that every other module posts to. The group has: **Chart of accounts, Cost centers, Journal entries, Controls, Incomes, Reports**, and, when the Expenses module is used, the Expenses pages (next chapter).

> **Note:** Most entries are posted **automatically**: a sale posts revenue, tax and stock cost; a purchase posts stock and payables; payroll, depreciation, hotel night audit and so on post by themselves. Manual journal entries are for the exceptions. Setting up the chart of accounts and the controls is described in the Administrator Manual (chapter 6).

10.1 Chart of accounts

Accounting > Chart of accounts lists accounts (Code, Name, Description, Status). Accounts marked *system* are posted to automatically and cannot be deactivated.

New account: **Code** (cannot be changed later; for example 5300), **Name** (Rent Expense), **Type** (*Asset*, *Liability*, *Equity*, *Revenue*, *Expense*), **Description**, **Active**. Press **Ledger** on an account to see every transaction on it between two dates, with a running **Balance**.

10.2 Cost centers

Cost centers are tags (department, branch, project) that journal lines, expenses and incomes can carry, so that you can report cost by center. **New cost center**: Code, Name. Use *Inactive* to retire one.

10.3 Journal entries

Journal entries > New manual journal entry:

1. **Date** and **Memo** (for example *Owner contribution* or *March rent*).
2. For each line choose the **Account**, a **Description**, an optional **Cost center**, and a **Debit** or a **Credit**. **+ Add line** adds more.
3. **Debits and credits must add up to the same total** before you can save; the screen shows the totals.
4. **Save**.

The list shows entries from every module as well as manual ones; open one to see its lines and its source.

> **Warning:** Posted entries are not edited. To correct a mistake, enter a reversing entry or void the source document. If the books are closed up to a date, you cannot record anything on or before that date.

10.4 Incomes (money received that is not a sale)

Incomes > New income: **Date**, **Category** (a revenue-type account; add *Other Income* in the chart first if needed), **Received from** (*Customer*, *Vendor (supplier)*, *Staff*, *Other / one-off*), the person or **Payer name**, **Amount**, **Received immediately (into Cash)** (if unticked it is posted as money still owed to the store), optional cost center, branch and memo.

10.5 Controls (accountant and administrator)

Accounting > Controls has three tabs:

- **Close the books**: close the books up to a date once a period is final (for example after the March accounts are approved). Nothing dated on or before that day can then be recorded: invoices, bills, expenses, journals, imports. Voiding or correcting still works because it is recorded today. Enter the date and **Why**. **Only an admin can close or reopen the books**, and every change is logged with the reason and who did it.
- **Bank reconciliation**: **Start a reconciliation** by choosing the account, the **Statement date** and the **Ending balance on the statement**. Tick the ledger lines that appear on your bank or mobile-money statement; the screen shows **Statement balance, Matched so far, Difference**. When the difference is zero, save and complete it. **Undo** reverses a reconciliation. The system records all cash, bank and mobile money in one account called *Cash and Bank*; to reconcile a bank separately, add it as an asset account and move money to it with a journal entry.
- **Opening balances**: enter the balances of accounts when you start part-way through a year.

10.6 Reports

Accounting > Reports is a menu of reports. All can be exported to Excel and PDF.

Group	Reports
Accounting Reports	Tax Report, Tax Declaration, Income Statement, Balance Sheet, Profit & Loss, Financial Transactions, Cash Flow Report, Assets
Journals Reports	General Ledger (with opening and closing balance per account), Trial Balance & Nets, Trial Balance, Trial Nets, Ledger, Cost Centers, Journals Report, Chart of Accounts Directory
Expenses Reports	Expenses by Category, by Vendor, by Staff, by Client, Daily, Weekly, Monthly and Yearly Expenses

Choose the **From** and **To** dates. For the **Trial Balance**, click a line to see the entries behind it. The **Balance Sheet** and **Income Statement** use the whole ledger to the end date.

> **Tip:** Each month: review the trial balance, reconcile cash and bank, run the tax report, then **Close the books** up to the month end.

11 Expenses

The **Expenses** group (under Accounting) has: **Overview, Expenses, Budgets, Recurring expenses, Reports, Settings**. It records money the business spends outside purchase orders: rent, utilities, transport, repairs, fees.

11.1 The expense path

Enter the expense → **Approve** (if approvals apply) → **Pay** (now, or later if it is a bill) → reports.

11.2 Entering an expense

Expenses > New expense:

Field	What to enter
Date and **Category**	Choose an *expense account* (add one in the chart of accounts first if needed).
Paid to	*Vendor (supplier)*, *Staff*, *Customer*, *Other / one-off*, then the supplier, staff member or customer, or a **Payee name** (for example City Water Authority).
Total amount (including any VAT)	What was paid, VAT included.
VAT included in the total (optional)	Enter the VAT, or type a **%** and press **Calculate**. Enter **only VAT you can claim back**. It is kept in its own account, so the category carries only the cost without VAT.
Reference	Supplier invoice or receipt number.
Paid immediately	Tick it and choose the account it was **paid from** (Cash, a bank or a mobile-money account). If unticked, the expense is a **bill owed to the payee** that you can pay later, in full or in parts. Set a **Due date**; if empty it comes from the days set in Expenses settings.
Branch, Cost center, Memo	Optional tags and notes.
Receipts and bills	Attach photos, PDFs or text files, up to 10 MB each. More files can be added later on the expense page.

Every expense gets a **number**. Press **Save**.

11.3 Approval

Depending on settings, a new expense is **Pending** until approved.

- A person with the *Approve/reject Expenses* right presses **Approve** or **Reject** (with a reason). They may also **Void** an approved one.
- Expenses **above the approval limit** need an administrator or someone with *Approve large Expenses*.
- The settings may stop you approving an expense you entered yourself, and may block approval when it would go **over the monthly budget** (an administrator can still use **Approve anyway (over budget)**; the override is written to the history).

- A pending or rejected expense can be **deleted**; an approved one can only be voided.

11.4 The expenses list

Filters: search (payee, memo, number, reference), status (*Pending*, *Approved*, *Rejected*, *Voided*), category, dates, amount range, branch. Quick views include *overdue* and *due soon* bills. Tick several lines to **Approve selected** or **Reject selected** at once. Columns show **Number, Date, Payee, Category, Amount** (with VAT), **Payment** (*Paid*, *Settled*, *Unpaid*, *Part paid* and *Overdue / Due soon*), **Approval**, and a paperclip for attachments. **Excel** and **PDF** export the filtered list.

11.5 Paying a bill

Open an unpaid or part-paid expense and use **Pay this bill**: **Amount**, **Date**, **Paid from** (the account), **Note**. Paying less than the amount owed leaves the rest open. **Payments** lists each payment, and **Files** and **History** show attachments and every change.

11.6 Budgets

Budgets: set a **Monthly budget** for an **expense category** or a **cost center**, for a chosen year and month. The screen shows **Spent** (approved expenses dated in the month, without recoverable VAT), **Waiting for approval** (not counted yet), **Left** and **Used %**. Use **Change** or **Remove**. To enforce budgets, an administrator turns on *Block approval when it would go over the monthly budget*.

11.7 Recurring expenses

For regular costs such as rent. **Recurring expenses > New**: **Name**, **Category**, **Paid to**, **Amount**, **Paid immediately (from Cash)** (otherwise each generated expense is a bill), cost center, memo, **Frequency** (*Weekly*, *Monthly*), **Next run date**, **Active**. A daily job creates the next expense on or after that date and moves the date forward. Generated expenses are marked *Auto-generated by a recurring expense template* and go through approval like any other.

11.8 Overview

Expenses > Overview gives a summary: **This month / Last month / This year**, **VAT to claim back (this month)**, **Awaiting approval**, **Unpaid bills**, **Overdue**, **Due soon**, the last six months, **Top categories** and **Top vendors**, **Paid out this month, by account**, **Budgets near or over the limit** and **Bills that need attention**. Click a figure to open the matching list.

11.9 Reports

Expenses > Reports (four reports): **Expense Register**, **Unpaid Bills by Age**, **Budget vs Actual** and **Expenses by Payment Account**. Expenses by category, vendor, staff and period are under **Accounting > Reports**.

11.10 Settings (administrator)

Approval limit, the "not your own expense" rule, blocking approval over budget, days until a bill is due and the warning days before the due date. See the Administrator Manual, chapter 7.

12 Assets

The **Assets** group (fixed-asset register) has: **Asset register, Overview, New asset, From purchases, Categories, Verification, Reports, Settings**. It tracks things the business owns for years (vehicles, computers, furniture, equipment), depreciates them, and posts the entries to Accounting.

12.1 Categories (set up first)

Assets > Categories defines the defaults for each kind of asset: **Name**, **Method**, **Useful life** (in months), **Salvage value (% of cost)** and **Prorate the first month by days**. A new asset of that kind starts with these. Changing a category later does not change assets already registered. A category may have its own accounts (asset, accumulated depreciation, depreciation expense); left empty, the standard accounts are used. Examples: *Computers* (36 months), *Vehicles* (60), *Furniture* (84).

12.2 Registering an asset

Assets > New asset:

Field	Meaning
Asset name and **Tag**	For example *Delivery van*. If the tag is left empty one is generated (FA-0001…).
Branch, **Category**	Where it belongs and what kind it is.
Purchase date, **Cost**	When and for how much.
Depreciation Method	*Straight line* (same amount each month) or *Declining balance* (bigger early). **Useful life (months)**, **Salvage value**, **Start depreciating in**, **Prorate the first month by days**.
Depreciation already charged before this system	For an asset you already own: set *Start depreciating in* to the first month still to be charged. This opening amount is not posted to Accounting. Record it with a journal entry if needed.
Purchase posting	*Don't post* (the purchase is already in the books), *Post: paid in cash*, or *Post: owed to the supplier*.
Location, Held by, Serial number, Supplier	Where it is and who has it.
Warranty ends, Insurance ends, Insurance policy	The register and overview warn you before these dates.
Notes; photos and files	Attach several photos and files, such as the invoice and warranty card.

From a purchase turns an item on a received purchase order into an asset in one step.

12.3 The asset register

The register lists assets with **Tag, Asset, Category, Purchased, Cost, Accumulated, Book value, Branch, Place, Held by, Status** and totals at the top. Use the search (tag, name, serial, holder, place), filters (category, branch,

place, held by) and **quick views**: *All assets*, *Active*, *Fully depreciated*, *Disposed*, *Warranty ending*, *Warranty ended*, *Insurance ending*, *Insurance ended*.

Run depreciation charges every full month up to the date you choose that has not been charged yet and posts it to Accounting. It also runs by itself every day for months that have ended.

Tick several assets for bulk actions: **Move…** (to another branch or place, with date and reason), **Hand out…** (to a user or a typed name), **Take back**, **Print tags**.

12.4 Working with one asset

Open an asset to see its details and **history of everything done to it**. Buttons:

- **Print tag**: a printable QR tag to stick on the asset.
- **Maintenance history**.
- **Edit**: details only. If depreciation or the purchase posting already exists, cost, dates and depreciation terms cannot be edited here; use the actions below.
- **Transfer…**: move it to another branch (depreciation up to the month before stays with the old branch; later months go to the new one) and/or a new location.
- **Add an improvement**: money spent that makes the asset worth more or last longer is added to its cost; depreciation is spread again over the remaining life from the month after.
- **Write the value down (impairment)**: for damage or when worth less than the book value. It is charged as an expense and added to the accumulated depreciation.
- **Change the depreciation terms**: new remaining life, salvage value or method, from the month after the date you choose. Months already charged are not changed.
- **Take back the last month of depreciation**: removes the latest charge with a reversing entry. Not possible if an improvement, write-down or change of terms is dated after that month.
- **Hand this asset to someone**: gives custody to a user or named person and prints a **handover sheet**.
- **Dispose…**: enter the **Disposal date**, **Sale proceeds** (0 = written off) and a note. Depreciation is charged to the month before disposal, then Accounting records the cash received, removes the asset and its accumulated depreciation, and books the gain or loss. **A book value above the approval limit needs an administrator or a user with the *Approve large asset disposals* right.**
- **Undo disposal…**: a person with approval rights can reverse a disposal made by mistake. Accounting gets a reversing entry and the asset becomes active again.
- **Delete**: only for an asset that has no postings.

12.5 Verification (physical counting)

Assets > Verification checks that assets are really where the books say.

1. **Start a round**: give it a **Name** (for example *Year-end count*) and limit it by **Branch, Category** or **Place**. **Start Round** lists the assets that should be there.
2. Walk around and mark each asset **Found**, **Missing** or **Damaged** (with **found at** and a note). **Mark everything still unchecked as Found** speeds up a quiet round. **Move assets to the place where they were found** corrects locations.
3. **Close the round** once everything is checked.

4. A **Missing** asset can be **Written off…** from the round.

12.6 Overview

Assets > Overview: **Assets in use, Total cost, Accumulated depreciation, Book value, Next month's depreciation, Fully depreciated, Disposed, Nobody holding, Open verification rounds**, a warning if depreciation is **months behind**, breakdowns **by category** and **by branch**, and a watch list: warranty or insurance ending soon, and assets that will be fully depreciated soon.

12.7 Reports

Assets > Reports: Asset Register, Assets by Category, Assets by Location, Assets by Holder, Warranty and Insurance Expiry, Depreciation Forecast, Fixed Asset Movement, Asset Verification, Depreciation Schedule, Asset Disposals, Asset Transfers.

12.8 Settings (administrator)

The warning days for warranty and insurance, the *fully depreciated soon* window, and the **disposal approval limit**.

13 Human resources and payroll

The HR menus are: **Employees** (*Employees*, *New employee*, *Documents*, *Onboarding*, *HR reports*), **Org** (*Departments & positions*, *Organization chart*), **Attendance** (*Attendance*, *Leave*, *Team calendar*, *Settings*), **Contracts**, and **Payroll** (*Payroll runs*, *Adjustments*, *Advances & loans*, *Tax & social security*, *Rules & tax bands*).

Access to HR needs the *Human resources* area, and to contracts and payroll the separate *Payroll and contracts* area, because they carry salary data.

13.1 Employees

13.1.1 Adding an employee

Employees > New employee:

- **Personal details**: first and last name, date of birth, national ID, phone, e-mail, address, emergency contact and phone.
- **Job**: **Employee number** (automatic: EMP-0001…), **Hire date**, **Employment type** (*Full time*, *Part time*, *Casual*, *Intern*), **Job title**, **Department**, **Position**, **Reports to**, **Branch**.
- **Staff login (lets them clock in and out themselves)**: link the employee to a user account, or create one with **Give login**. The password is shown once; give it to the employee. They then use **My HR**.
- **Track attendance for pay**: when ticked, payroll deducts absent days and pays overtime from attendance records. Leave it off for salaried staff who do not clock in.
- **Bank and statutory numbers**: bank, account number, tax number, social security number.

Several employees can be loaded at once with the **employee import** (Excel/CSV with a template; use *Check file* first).

13.1.2 The employee page

Shows details, **Leave balances**, **Leave requests**, **Contracts** (with **+ New contract**), documents, checklists and the **Annual earnings and tax certificate** (month by month gross pay, income tax and contributions of approved and paid payrolls for a year).

Actions: **Edit**, **Mark inactive**, **Delete** (only if no history), **Give login**, and **Employee left** (enter the **Last day** and **Reason**; this also ends the active contract on that date and can prepare **Final pay**).

13.1.3 Documents

Employees > Documents stores contracts, IDs, certificates and other files per employee, with an **expiry date**; expiring documents are summarised so that you can renew them. An employee can see the documents HR shares with them in **My HR**.

13.1.4 Onboarding and offboarding

Onboarding holds checklists of tasks. A **template** is a ready list (name, *For* new starters or leavers, tasks with who is responsible and a due date counted in days from the hire date or the last working day). Start a checklist from an employee's page. **Open tasks** lists what is waiting, with **Overdue only** and **Mark done**.

13.2 Organisation

- **Departments & positions**: create departments and positions that you pick on employees.
- **Organization chart**: shows departments and **reporting lines** from the *Reports to* field.

13.3 Attendance

Attendance has two tabs. **Daily records** lists each day's *In*, *Out*, *Hours*, *Overtime*, *Status* (*Present*, *Late*, *Absent*) with filters. Employees with a login see **My day** and press **Clock in** and **Clock out**. HR uses **Add or correct a day** to enter or fix a record (saving a day that already has a record replaces it). Hours and overtime are worked out from the in and out times and the working hours in **Settings**. **Summary** shows each employee's expected days, present, late, absent, on leave, hours and overtime for a period.

13.4 Leave

Leave has **Requests** and **Balances**.

- **New leave request**: employee, leave type, **From**, **To**, reason, and tick *first day / last day is a half day*. Weekends and public holidays are not counted; the working days are shown. An employee can ask for leave themselves in **My HR**.
- HR or a manager presses **Approve** or **Reject**, or **Cancel**.
- **Balances** show for the year: **Entitled, Earned so far, Carried over, Used, Pending, Remaining**. Types earned monthly add one twelfth of the days per month worked. Carried-over days come from unused days of earlier years, up to the type's limit.
- **Team calendar** shows who is away when.

13.5 Contracts

Contracts > New: **Employee**, **Type** (*Permanent*, *Fixed term*, *Probation*, *Casual*, *Internship*), **Job title**, **Start date**, **End date**, **Monthly basic salary**, and **Allowances and fixed deductions (monthly)**: each has a name, a kind (*Allowance (added)* or *Deduction (taken)*), an amount and whether it is **Taxable**. A deduction, for example a loan repayment, is taken from net pay after tax. A new contract is a **draft**; **activate it from the contract list when it is signed**. A report lists contracts expiring in the next 60 days.

13.6 Payroll

13.6.1 Monthly routine

1. Before the month closes: make sure contracts, leave, attendance, **Adjustments** and **Advances & loans** are up to date.
2. **Payroll > Payroll runs > Run payroll for a month**: choose the month. The system works out the pay of everyone with a contract in that month.
3. Review the run: **Gross pay, Income tax (PAYE), Contributions, Net pay, Employer cost** for each employee. If you change contracts, leave or attendance, press **Recalculate**.
4. **Approve and post**: the payroll is posted to Accounting and locked.

5. **Pay the salaries**: download the **Bank transfer file** (CSV or Excel; columns *No*, *SURNAME*, *NAME*, *NET SALARY*, *ACCOUNT NO*, *BANK NAME*), upload it to your bank, then press **Mark salaries as paid**. Employees without a bank account are listed.
6. **Payslips** can be e-mailed to each employee as a PDF (needs e-mail set up).
7. **Papers**: the **Payroll register** (Excel, PDF, CSV) and **Returns for the authorities**: income tax and social security (Excel and PDF).
8. **Record payments** of tax and social security when you pay the authorities (below).

If something was wrong: **Reopen** an approved payroll (entries are reversed and loan repayments given back), or **Cancel payment** if the bank transfer failed. Neither is possible while tax or social-security payments are recorded for that month.

13.6.2 Adjustments

Payroll > Adjustments: a one-off item for an employee in a month: a **bonus, arrears or allowance** (adds) or a **fine or uniform charge** (takes), with a name, amount, month, whether it is taxable and a note. It is included the next time that month's payroll is generated. After approval it cannot be changed.

13.6.3 Advances and loans

Advances & loans > Give an advance or a loan: choose the **employee**, the **Kind** (*Salary advance (taken in one go)* or *Loan (repaid over months)*), the **Amount given**, **Taken each month** and the date. The cash given is recorded in Accounting. Every payroll then takes the installment until nothing is left (the last one is only what remains). An advance starts in the month it is given, a loan in the next. Open a loan to see **Repayments**, **Record** a cash repayment, **Write off** the rest (it becomes a salary cost) or **Cancel this loan** (only if nothing has been repaid).

13.6.4 Tax and social security

Payroll > Tax & social security lists, for each approved payroll month, what is **Owed**, **Paid** and **Still owed**, with the **Due** date (income tax and contributions are due by a day of the next month), marked *Settled* or *Overdue*. Use **Record payment**: **Amount, Paid on, Paid to, Receipt / reference, Note**. **Payments made** lists them and lets you cancel one entered by mistake.

13.6.5 Rules and tax bands (administrator or payroll manager)

Rules & tax bands holds the **Income tax bands** (each taxes the part of taxable pay inside it: From, To, Rate %) and the **Contribution rules** (name, paid by employee or employer, rate %, based on gross, basic or net pay, monthly cap, owed to *Social security* or other, and whether it reduces taxable pay). **The ready-made figures are a starting point, not legal advice. Confirm every rate, ceiling and band with your accountant before running a real payroll.** If no tax bands are set, income tax is 0 for everyone.

13.6.6 Final pay

When an employee leaves, **Final pay** adds the remaining days' pay, **unused leave days paid out**, **notice days the company pays** or **notice days not served**, and can take the loans back from this pay (pay is never cut below zero; what is left stays owed). It is added to the payroll of the month and taxed like the rest.

13.7 Reports

HR > Reports: Employee Directory, Headcount by Department, Leave Balances, Leave Requests, Attendance Summary, Contracts Expiring (60 days), **Payroll Register** and **Payroll Summary**. Salary reports are restricted to people with payroll access. A **yearly summary** (one row per employee) is on the Payroll runs page.

14 Time tracking

The **Time tracking** group has: **Projects, Approvals, Bill time, Reports, Settings**. Every person who logs time uses **My time**.

14.1 The path of a piece of time

Log (timer or manual) → **Submit for approval** at the end of the week → **Manager approves** → **Bill time** creates a draft invoice → issue the invoice.

14.2 Logging your time (everyone)

Open **My time**. The top shows **Today, This week, This month** hours and what you still need to submit.

With the timer: choose the **Project** (and **Task**), write *What are you working on?* and press **Start**. When finished press **Stop and save**, or **Discard**. A timer left running is stopped automatically after a number of hours set by your administrator, and kept as a draft for you to check. If you forgot a timer, stop it and correct the time.

By hand: choose the **Date**, **Project**, **Task**, enter **Time** (type 1:30, 1.5, 90m or 2h), *What did you do?*, and tick **Billable** if it is billable. Rates come from the project; you do not enter any.

Your week: use **Previous week / Next week** to move around. **Copy last week** repeats last week's entries. Edit or delete a line while it is still a draft. When the week is complete press **Submit … for approval**. An entry that is **Sent back** shows the manager's reason: correct it and submit again.

> **Note:** Your administrator can lock time up to a date (approved and invoiced weeks cannot be changed), cap hours per day and e-mail a weekly reminder to people who have not handed in last week's time.

14.3 Projects (manager)

Projects > New:

- **Name**, **Code**, **Customer (who is billed)**, **Status** (*Active: time can be logged; Completed: no new time; Archived: hidden*), **Description**.
- **Hourly rate** (or use the default), **Budget (hours)**, **Start** and **End**.
- **Time on this project is billable to the customer**, and **Refuse time that would go over the budget** (needs a budget; managers can still correct entries).
- **Project team**: only the people listed can log time on the project (administrators always can).
- **Tasks**: optional breakdown with an **Estimate (h)** and the hours logged so far.
- **Rates per person**: anyone not listed is billed at the project rate. A rate is fixed on an entry when it is submitted, so a later change does not alter time already handed in.

The project page summarises **hours logged, billable, ready to invoice** and **budget used %**, and links to billing.

14.4 Approvals and team time (manager)

Approvals shows:

- **Not submitted**: for the chosen week, the people who normally log time but have not handed in everything, with **Remind** per person or **Send reminder to everyone listed**.
- **Waiting for approval**: filter by status (*Not yet submitted*, *Approved*, *Sent back*, *Invoiced*), person and project. Tick entries and **Approve**, or **Send back** with a reason. **Correct** lets a manager fix the time or description before approving.

14.5 Bill time

Bill time lists **Project, Customer, Billable hours, Ready to invoice**. Press **Prepare invoice** for a project: choose the period and due date. The screen shows one line per person and rate (Hours, Rate, Amount). **Create draft invoice** creates a draft in Sales that you can still edit before issuing. Tax follows the service product set in Time tracking settings. **Undo a time invoice** releases time so it can be billed again after a draft invoice was deleted or an issued one was voided.

14.6 Reports

Time tracking > Reports: Timesheet Summary, Project Hours vs Budget, Unbilled Time, Utilisation, Time Entries.

14.7 Settings (administrator)

Approval switch, rounding of timers, default rate, daily hour limit, forgotten-timer stop, time lock, weekly reminder, budget warning % and the service product (Administrator Manual, chapter 7).

15 Work orders

The **Work orders** group has: **Work orders, Board, Calendar, Planned maintenance, Service packages, Reports**. A work order (job card) records a piece of work for a customer, or internal maintenance, with its people, parts, time, costs and billing. Staff with a login see their own jobs under **My jobs**.

15.1 Creating a job

Work orders > New work order:

- **Type**: *Customer job (billed)* or *Internal maintenance or repair*.
- **Priority**: *Low*, *Normal*, *High*, *Urgent*.
- **Start from a service package** (optional): copies the package's checklist, parts and price.
- **Title**, **Description**, **Customer**, **Asset (optional)** (an item from the asset register, for maintenance cost reports), **What is being worked on** (for example *Laptop serial 123* or *Vehicle RAB 123A*).
- **Assigned to**, **Scheduled**, **Due**, **Hourly rate** and an optional **Fixed price** (leave empty to bill hours and parts).

15.2 Estimates and customer approval

If your administrator switched on *New customer jobs need the customer's approval*, work cannot start until an **estimate** has been sent to the customer and **approved** (the job shows *Approved* or *Declined*). You can switch this off for a single job. The customer receives a PDF estimate and the **job card** and a completion note are PDFs you can print or e-mail.

15.3 Working on a job

On the job page you have:

- **Checklist**: steps to tick off (**Edit steps**: one step per line). A job cannot be completed with open steps unless you tick *Complete even though … checklist step(s) are not done*.
- **Parts and materials**: search a product and add it with a quantity and price (or mark *In fixed price*). **Stock moves and the cost is posted when the job is completed**, so record every part first.
- **Outside costs**: a supplier's work or a purchased item (date, what, supplier, cost, **Charge customer**), optionally **Record as expense in** an account, or *Don't record*.
- **Hours**: time logged on the job by people through *Log time* (internal hours are recorded for information; salaries are paid through payroll; with a fixed price the hours are not billed).
- **Cost and price**: parts cost, outside costs, total cost and the price.
- **Manufacturing Order**: to make something for the job, create a linked manufacturing order from a bill of materials; the job cannot be completed until the order is produced.
- Photos and files can be attached.

Buttons: **Put on hold**, **Log time**, **Edit details**, **Complete…**, **Reopen**, **Cancel job**, **Delete**.

15.3.1 Completing and invoicing

Complete… takes the parts out of stock and posts their cost, with an optional note. Then **Invoice**: preview what will be billed (lines and total before tax), set a due date and **Create draft invoice**. The job shows **On invoice**. **Release (bill again)** frees it if the draft was deleted.

15.4 Board and calendar

- **Board**: columns by status. **Drag a card into In progress to start it, or into On hold**. Filter by **Everyone / Unassigned**, **Customer and internal**, **Customer jobs**, **Internal maintenance**, or search. Cards show *Due … (late)*, urgency and checklist progress.
- **Calendar**: jobs by scheduled date, to plan the week.

15.5 Planned maintenance

Planned maintenance creates jobs for you on a repeating schedule (for example servicing a generator every 3 months). **+ New schedule**: **Title**, **Type**, **Priority**, **Customer**, **Asset**, **Service package**, **Assigned to**, prices, **Repeat every n days/weeks/months**, **Next one is due**, **Create the job this many days early**, **Job is due after n days**, and *Do not create a new job while the last one is still open*. A check runs every morning; **Run now** creates due jobs immediately.

15.6 Service packages

Service packages are templates: **Name, Code, Description, Fixed price** (0 = bill hours and parts), **Estimated hours**, a **Checklist** and **Usual parts** (with quantity and whether in the price).

15.7 Reports

Work orders > Reports: Work Orders, Work Order Profitability, Maintenance Cost by Asset, Overdue Work Orders.

16 Booking (appointments)

The **Booking** group has: **Calendar, Appointments, Services, Rooms & equipment, Working hours, Reports, Settings**. It is for businesses that sell time slots: salons, clinics, studios, courts. Staff who perform services see their own list under **My appointments**. Guests can also book by themselves on the public page, if your business switched it on.

16.1 Set-up (manager)

16.1.1 Services

Services > New: **Name**, **Description** (shown on the public page), **Length (minutes)**, **Buffer after (minutes)** (cleaning or rest time), **Price**, **Payment needed to confirm** (*None: pay at the visit; A deposit; The full price*, with **Deposit (% of price)**), whether it **Needs a room or piece of equipment** of a kind (for example Room, Chair, Court), a **Colour on the calendar**, **Who can do this** (leave empty for anyone), **Can be booked** and **Show on the public booking page**.

16.1.2 Rooms and equipment

Rooms & equipment: add a room or piece of equipment (Name, Kind, Capacity, Notes) only if your services need one. **Blocked time** stops bookings for everything (a public holiday), one person (leave) or one room (repairs): choose *Applies to*, the dates and a reason.

16.1.3 Working hours and leave

By default everyone who performs a service can be booked during the business opening hours. **Working hours** lets you give a person their own days and hours (inside the opening hours) and add **Leave** for days they are away.

16.2 Making an appointment

Calendar > New appointment:

1. Choose the **Service**. Its length and price are shown.
2. Choose the **Date**, optionally **Prefer a person** (*Anyone free*), and pick a **Time** from the free slots. If nothing is free, try another day or person.
3. **Person** and **Room / equipment**: *Assign automatically* or pick.
4. **Who is it for?** An existing customer, or a walk-in (name, phone, e-mail for the confirmation) and notes.
5. If the service needs payment to confirm, an **invoice is raised** and the time is **held** for the guest to pay. Tick **Confirm now without waiting for payment** to skip this.

16.3 The calendar

Booking calendar shows the day by hour, **By person** or **By room / equipment**, with counts for *Today*, *Next 7 days*, *Waiting for payment* and *No-shows this month*. Unpaid and no-show appointments are marked. **Print day sheet** gives a sheet for the day.

16.4 Working with an appointment

Open an appointment to see the time, the person, a **Code**, how long it is held, and the guest's other visits (a warning shows if the guest has missed earlier appointments). Actions:

- **Confirm without payment**, **Mark done**, **No-show**.
- **Move to another time**: pick a free slot.
- **Cancel appointment** (optional reason). An unpaid invoice for this booking is voided; money already received stays on the invoice for you to refund or keep.
- **Payment**: shows price and deposit, the **Invoice**, what is paid; **Record payment** or **Create invoice**.
- **Reminder and calendar**: **Send reminder now** (e-mail with a calendar file) or **Download calendar file**. A reminder is sent automatically before the visit when the setting is on. Guests can also move their own booking online.
- **Notes**.

16.5 Reports

Booking > Reports: Appointments, Booking utilisation, Bookings by service.

16.6 Settings (administrator)

Opening hours, booking rules (earliest, furthest ahead, hold for payment, online cancel), reminders, the public page at `/book` and how to pay.

17 Subscriptions

The **Subscriptions** group has: **Subscription plans, Subscriptions, Overview, Reports, Job settings**. Use it for anything billed on a regular cycle: memberships, support contracts, software, rent-like services.

17.1 Plans

Subscription plans > New: **Name** (for example *Gold membership*), **Description**, **Price**, **Billing interval** (*Weekly*, *Monthly*, *Quarterly*, *Yearly*), **Tax rate**, **Discount %** (default for new subscriptions; editable per customer), and **Active**. Inactive plans stay on existing subscriptions but cannot be chosen for new ones.

17.2 Starting a subscription

Subscriptions > New subscription:

1. **Customer** (or **+ New customer**) and **Plan** (or **+ New plan**).
2. The price, interval, tax and discount are pre-filled from the plan; change them to give this customer a different deal.
3. **Quantity (seats / units)**: each invoice bills quantity × price.
4. **Setup fee (one time)** is added to the first invoice only. **Free trial (days)**: billing starts when the trial ends.
5. **Start date** and **Billing timing**: *Prepaid* (bill on the start date, before that cycle's service) or *Paid after service* (bill one cycle after the start).
6. **Term (billing cycles)**: blank = until cancelled; for a fixed term choose what happens **at the end of the term**: *Renew for another term* or *End the subscription*.
7. **Create subscription**.

17.3 Managing a subscription

The page shows status, price, interval, next and last billing, term and notices (*Free trial until…*, *Paused*, *Cancellation scheduled*). Buttons:

- **Bill now**: issue the next invoice right away.
- **Edit terms**: change price, quantity, interval, discount, tax, setup fee or term. *Changes apply from the next bill. Nothing is charged or credited now.*
- **Change plan**: move to another plan, with the option to **settle the unused part of the current period now** (for prepaid subscriptions already billed). The screen shows days left and the monthly value before and after.
- **Pause…** with an optional reason and **Resume automatically on** date; **Resume** when ready.
- **Skip next billing**: skip one cycle.
- **Cancel subscription**: **Cancel now**, or **At the end of the paid period**. A scheduled cancellation can be withdrawn. Cancelling now cannot be undone.

Billing history lists the invoices and their status; **Activity** records every change.

Invoices are generated automatically each day for subscriptions whose billing date has arrived (if your administrator left that on). The job can also send reminders before billing, pause or cancel subscriptions whose invoice stays unpaid, and e-mail the customer when an invoice is overdue.

17.4 Overview

Subscriptions > Overview: **Monthly recurring revenue**, yearly value, **Paying subscriptions**, average, **On trial / paused**, **Left in the last 30 days**, **Churn %** and new ones, **Billing in 7 / 30 days**, **Unpaid invoices**, **Ending**, and lists of *On trial*, *Cancelling*, *Term ending*, *Resuming*, *Billing next*, plus the unpaid subscription invoices with *Days late* and *Reminders*.

17.5 Reports

Subscriptions > Reports: Subscriptions by Plan, Cancelled and Ended Subscriptions, Unpaid Subscription Invoices.

17.6 Job settings (administrator)

The daily run time, automatic billing, reminders, what to do with unpaid invoices, the daily digest and catching up missed cycles.

18 Installments

The **Installments** group has: **Agreements, Collections, New plan, Reports, Settings**. It lets a customer pay an existing invoice in parts over time, with optional interest and late fees.

18.1 Creating a plan

1. Issue the invoice first (Sales > Invoices). On the invoice press **Pay in instalments**, or use **Installments > New plan** and choose an **Invoice** (an issued invoice with a customer and an unpaid balance).
2. The screen shows the **Invoice total, paid** and **still owed**.
3. Optionally take a **Deposit now** (and how it is **paid by**). The deposit is recorded as a payment on the invoice.
4. Set the **Number of instalments**, **Every** (week, 2 weeks, month, 3 months) and the **First due date**.
5. **Interest**: *None*, *Flat (on the whole amount)* or *Reducing balance*, with a **Yearly rate %**. Add **Grace days**, a **Late fee (fixed)** and/or a **Late fee (% of unpaid)**. Tick **Whole amounts (no cents)** for currencies without cents; the last instalment takes any rounding.
6. Tick **Email the customer reminders for this plan** if wanted.
7. Press **Preview schedule** to see each instalment's due date, principal, interest and total, then save. The starting values come from Installments settings.

18.2 Collecting

On a plan, **Record a payment**: amount, method and note. A payment goes to the **oldest unpaid instalment first**; interest and late fees are settled before principal. The plan shows **Total payable, Paid, Outstanding, Overdue**.

Documents: **Schedule (PDF)**, **Statement (PDF)**, **Agreement (PDF)** (printed with the terms), **E-mail statement** (optionally with the agreement), **Send reminder**.

18.3 Managing a plan

- **Edit schedule**: change dates and amounts, add or remove unpaid instalments. What is already paid stays as it is; the principal must still add up and interest cannot go below what was paid. **Split principal evenly** helps.
- **Pay off early**: settles every unpaid instalment today. Part of the interest on instalments not yet due can be waived (a percentage, changeable per payoff). It shows *Principal left*, *Interest left*, *Late fees left*, *Interest waived* and **To pay now**; press **Receive ... and close the plan**.
- **Mark defaulted**: the customer has stopped paying. No more late fees or reminders are added; payments are still accepted; use **Back to active** to reverse. Your settings may default plans automatically after a number of days overdue.
- **Write off**: books the unpaid principal as a bad debt and the invoice shows nothing outstanding. A reason is required. This cannot be undone from here.
- **Cancel plan**: whatever is unpaid stays on the invoice as an ordinary debt; unpaid interest and late fees are dropped.

18.4 Collections

Installments > Collections is the collector's work list: **Overdue in this list**, **Broken promises**, **Promised for today**, **Never contacted**. For each plan it shows the customer, overdue amount and age, next due date, last contact and promise to pay. **Log contact**: *Phone call*, *Visit* or *Promise to pay* (with a date and amount) and a note. Every send is added to the collections log.

18.5 Reports

Installments > Reports: Instalment Agreements, Instalments Due (next 30 days), Overdue Instalments, Defaulted and Written-off Instalments, Instalment Collections.

18.6 Settings (administrator)

Reminder timing, starting values for new plans, early-payoff interest waiver, automatic default, and the agreement wording.

19 Help Desk

The **Help Desk** group has: **Overview, Tickets, Saved replies, Categories, Settings, Reports**. It handles requests from customers and from colleagues (internal requests), with deadlines, replies by e-mail and a full history.

19.1 Where tickets come from

- Staff create them: **Tickets > New** (a phone call, a walk-in).
- Customers send a request themselves on the public page `/helpdesk` (if switched on) and can follow the ticket, reply, add files and rate the help.

19.2 Creating a ticket

Tickets > New ticket: **Type** (*Customer request* or *Internal request*; the type cannot be changed afterwards), **Customer** (optional, an existing customer or not), **Requester name, email, phone**, **Subject**, **Description**, **Category**, **Priority** (*Low*, *Medium*, *High*, *Urgent*) and **Assign to**.

19.3 Working a ticket

A ticket's page shows its status, priority, category, requester, dates and, if deadlines are on, **First reply due** and **Resolve by**, with a colour when late.

- **Conversation**: choose **Internal note** (staff only) or **Reply to the customer**. A reply is e-mailed to the customer when the ticket has an e-mail address. **Insert a saved reply…** inserts a ready answer; placeholders are filled from the ticket. Tick **Then wait for the customer's answer** to set the status to waiting.
- **Wait for customer**: pauses the deadline clock until the customer answers.
- **Resolve** (with optional *Resolution notes*), **Close**, **Reopen**. Resolved tickets are closed automatically after the number of days set in settings.
- **Assigned to** and **Tags** (for example *billing*, *vip*).
- **Links**: attach an **Invoice number** or a **Job (work order) number** to the ticket, and follow the link back and forth.
- **Merge into another ticket…**: use it when the same problem was reported twice. The conversation and files move to the ticket you choose, and this one is closed as merged.
- **Files**: add pictures, PDFs or text (up to 10 MB each); tick **Customer can see** to share it on the public ticket page.
- **History**: every change, with who and when.

19.4 The ticket list

Filter by status, priority, category, assignee and quick views (*overdue*, *unassigned*, *mine*). Tick several tickets for bulk actions such as assigning.

19.5 Overview

Help Desk > Overview shows: **Unanswered**, **Overdue** (past a deadline), **Due soon**, **Unassigned**, **Open / in progress**, **Mine**, last 7 days in and out, **On time (30 days)**, **Avg first reply**, **Avg time to resolve**, **Customer rating**, tickets by priority and age, **Workload** per agent (*Active*, *Overdue*, *Resolved (30 days)*) and a **Needs attention** list with the reason.

19.6 Saved replies

Saved replies > New: a **Title**, the **Reply text** and an optional **Category**. Placeholders for the ticket's details are filled in when you insert the reply.

19.7 Categories

Categories group tickets (for example *Billing*, *Technical*, *Delivery*) for routing and reports.

19.8 Reports

Help Desk > Reports: Help Desk Tickets, Help Desk Deadlines (SLA), Help Desk by Agent, Help Desk by Category, Help Desk Satisfaction, Overdue Help Desk Tickets.

19.9 Settings (administrator)

Public page on/off, notification e-mails, replies by e-mail, deadlines (SLA) by priority, warnings and automatic closing (Administrator Manual, chapter 7).

20 Law firm

The **Law firm** group has: **Overview, Matters, Clients, Deadlines & tasks, Billing, Fee collections, Client money, Templates, Reports, Settings**. Lawyers also have **My work** (their own deadlines and tasks) and log hours in **My time**.

20.1 Clients and matters

A **matter** is one case or engagement. A client appears under **Clients** as soon as a matter is opened for a customer; clients are ordinary customers, shared with Sales.

20.1.1 Opening a matter

Matters > New matter:

- **Title** (for example *Mukamana v. Habimana*, *land dispute*), **Client**, **Lead lawyer** (default: you).
- **Practice area**, **Jurisdiction**, **Court or forum**, **Court case number**, **Opened** date.
- **How it is billed**: *Hourly*, *Fixed fee*, *Retainer*, *Contingency*, *Pro bono / legal aid*, and a **Fee agreement** in words.
- **Description**.
- **Restricted: only the team and admins can open this matter**. Restricted matters are hidden from everyone else, including in lists, reports and fee collections.

Run the conflict check on the next screen before you start work. The **conflict check** searches clients, contacts and the opposing parties, lawyers and witnesses recorded on matters, and logs the search. Record each **party** on the matter (name, role, phone, e-mail, ID, note) so the check can see them.

20.1.2 On the matter

The matter page has tabs and sections for the **team**, **deadlines**, **tasks**, **parties**, **documents**, **billing**, **client money** and **papers**. Matter status buttons: **Put on hold, Resume, Close matter** (enter the **Outcome**, how it ended), **Reopen**, **Delete**. A matter that still holds client money cannot be closed.

- **Deadlines and tasks**: add court dates, filing dates and limitation dates so nothing is missed: **What, Type, Date, Time, Assigned to**, notes. **Done**, **Reopen**, **Edit**, **Delete**. Tasks have **Due, Assigned to, Priority** (*Low*, *Normal*, *High*, *Urgent*) and **Start**.
- **Papers**: a file cover sheet, an engagement and fee letter, and a closing letter. Print them, keep them in the matter's documents, or e-mail the two letters to the client.
- **Documents**: upload and keep files on the matter; a client portal can share chosen documents.

20.2 Deadlines, tasks and the calendar

Deadlines & tasks lists everything due, with filters for mine or everyone. The **Calendar** shows month and week views of deadlines (mine or everyone's), with tasks and finished items on request, and a **calendar file (.ics)** you can download into Outlook, Google Calendar or a phone. Lawyers see a **daily e-mail** of deadlines and tasks due soon or overdue if your administrator switched it on.

> **Warning: Limitation dates** are special. Missing one can lose the case. The lead lawyer and the person assigned receive e-mail warnings at the interval set in Law firm settings (first warning, a second 3 days before, and one if the date has passed and the deadline is still open). **Mark the deadline as done to stop them.**

20.3 Time and billing

- Lawyers log hours in **My time** and pick the matter. Hours on hourly and retainer matters are billed; on other kinds they are tracked but not billed.
- On a matter's **Billing** tab: **Hours logged, Approved time to bill, Costs to bill, Fixed-fee stages to bill, Billed (before tax), Retainer left**. **Fee terms** shows and lets you change the rate, fixed fee, retainer or contingency %. **Rates per person** override the matter rate. Approve waiting time (**Approve selected** or **Send back** with a reason).
- **Costs paid for the client** (court and filing fees, travel, courier): record the date, what, paid to, cost, **Charge client**, and optionally **Also record in Expenses**. Charged costs go on the next invoice.
- **Fixed-fee stages** are billed as each stage completes.
- Create the invoice from the matter; **Open the invoice** to review and issue it. The **Billing** menu shows an overview across matters, and **Law billing and work in progress** is a report.

20.4 Fee collections

Fee collections lists unpaid issued invoices with days late and a "how late" table. You can **send reminder e-mails** (one per client, with the fee statement attached), produce a **PDF statement of fees** per client (and e-mail it), and export the list. Automatic reminders can be switched on in settings.

20.5 Client money (trust account)

Client money belongs to the client, not the firm, and is kept separately. If it is switched off, an administrator must turn it on in Law firm settings.

On a matter's **Client money** tab:

- **Receive money**: **Amount, Date received, How paid, Reference, Paid in by, What it is for**. A **receipt** can be printed. *Never put the firm's own money or its fees in the trust account.*
- **Pay out**: **Amount** (never more than the client has), **Date**, **How paid**, **Reference**, **Paid to**, **What it is for**. The money leaves **only after another person approves** (the matter's lead lawyer or an admin): you press **Ask for approval**. A **payment voucher** can be printed.
- **Pay an invoice from trust**: choose the invoice and amount; it is marked paid and the client's balance goes down when another person approves. A **fee transfer voucher** is printed.
- **Client statement**: choose dates, **Print statement** or **E-mail to the client**.

Client money > Overview shows what is held per client and matter and what is waiting to be paid out. **Reconcile** compares the trust account with the bank statement; a printable sheet exists for any past reconciliation.

20.6 Templates

Templates keep standard letters and documents with fields filled from the matter.

20.7 Importing clients and matters

An administrator or manager can **Import clients** and **Import matters** from Excel or CSV: download the template, choose the file, **Check** (nothing is saved), then **Import**. Time, deadlines, documents, invoices, fee amounts and stages are not imported; set the fees on the matter afterwards.

20.8 Reports

Law firm > Reports (13): Law matters, Law deadlines, Law billing and work in progress, Law fees billed, Client money held, Client money ledger, Law workload, Law lawyer productivity, Law matter profitability, Law unpaid invoices by age, Law documents and client portal, Law conflict check log, Law caseload by practice area and court. Matters, clients, contacts, deadlines, tasks, billing, balances and ledger can also be exported from their own lists (restricted matters stay hidden from people not on the team).

20.9 Settings (administrator)

Practice areas and jurisdictions, default billing basis, restricted-by-default, limitation warnings, unpaid fee reminders and the client money switch (Administrator Manual, chapter 7).

21 Real estate (sales and brokerage)

The **Real estate** group has: **Overview, Properties, Leads, My follow-ups, Viewings, Deals, Projects, Unit sales, Collections, Commissions, Reports, Settings**. It is for agents and developers who list properties, work with buyers and tenants, and sell units in building projects.

21.1 The sales path

Property (a listing) and **Lead** (a person interested) → **Viewing** → **Deal** (offer, reservation, agreement, commission) → money collected. For a developer: **Project** → **Units** → **Unit sale** → **Collections**.

21.2 Properties

Properties > New property: type, address and area, price (sale or rent), size and features, description, **photos** (several; one is the main image), owner details and the **status** (for example available, reserved, sold). Add **documents** such as title deeds with optional expiry dates. A property can have **valuations** recorded over time. Print a **flyer with photos** for a property.

21.3 Leads

Leads > New lead: contact details, what they want (buy, rent, budget, area), the **source** and the **agent**. Each lead has a **diary** where calls, visits and notes are logged.

21.3.1 My follow-ups

My follow-ups is the agent's daily list: **late, due today, coming up, gone quiet** (a lead is "quiet" after the number of days in settings). Log a call or move the lead on; set the **next follow-up date**. If switched on, each agent gets a **morning e-mail** (about 06:30) listing late and due calls and quiet leads.

21.4 Viewings

Viewings is the diary: schedule a viewing of a property for a lead, with date, time and agent. A **reminder e-mail** goes to the client and one list to the agent before the viewing (hours ahead set in settings); use **Remind** to send one by hand. A **week calendar** (Monday to Sunday) shows the diary.

21.5 Deals

Deals > New deal: choose the **property** and the **lead or client**, the type (sale or rental), the agreed price, **commission shares** between agents (staff or outsiders), and the payment schedule. Stages run from offer through reservation and agreement to completion.

Printable documents for a deal: **offer, reservation, sale agreement (with the payment schedule), payment list and payment receipt**. The wording can be replaced in settings.

21.6 Projects and unit sales (developers)

- **Projects**: a building or development with its **units** (type, size, price). **Print a price list** for a project.
- **Unit sales**: sell a unit to a buyer with a payment schedule (**Unit sales > New**). Print the **sale agreement, payment list and receipts**.
- **Collections**: lists buyers who still owe (**late, due soon, no schedule**). Log **calls, promises to pay and notes** on each sold unit, send a **reminder e-mail** to the buyer, and print or e-mail a **buyer statement**.

21.7 Commissions

Commissions groups every commission share by person (staff or outsider) with its stage: **not earned yet, earned, awaiting approval, approved to pay, paid, rejected**. **Post all earned** sends earned commission to **Expenses**, where it is approved and paid. A **PDF statement** per person can be e-mailed to staff. Unit sales have no commission shares; this screen covers deals.

21.8 Importing

Import on the **Leads** and **Properties** screens loads Excel or CSV files: download a template, choose a file, read the check (nothing is saved), then import. Every skipped row is listed with its spreadsheet row number and reason; duplicates are caught.

21.9 Reports

Real estate > Reports (10): listings, leads, viewings, deals, commission, projects, price list, unit sales, valuations and documents. Lists also have Excel, PDF and CSV export.

21.10 Settings (administrator)

Areas, viewing length, quiet-lead days, morning e-mail to agents, viewing reminders, and the standard wording of printed documents.

22 Property management (rentals)

The **Property management** group has: **Overview, Properties, Units, Owners, Tenants, Leases, Rent, Arrears, Deposits, Charges, Maintenance, Owner statements, Fee invoices, Reports, Settings**. It is for agencies that manage rented property for owners: collecting rent, paying owners, charging a management fee and handling repairs.

22.1 The rental path

Owner and **property/units** → **Tenant** → **Lease** → monthly **Rent** invoice → **payment** → monthly **Owner statement** → pay the owner.

22.2 Setting up

- **Owners**: the people you manage for (contact, bank details, fee percentage if different).
- **Properties** and **Units**: a property has units (flats, shops). Set the **management fee %** on a property, or leave it so the owner's or the module's default is used.
- **Co-owners**: on a property page, the **Owners** panel shows who owns it. **Change owners** sets owners and their percentages (they must add up to 100%) from a date. Rent, management fee and repairs are shared by the split in force. Each owner gets their own statement and fee invoice. A split covered by an agreed statement is locked.
- **Tenants** and **Leases**: **Leases > New**: tenant, unit, start and end dates, rent amount and due day, deposit. Attach documents (lease, ID, title deeds) with optional expiry dates; an overview card shows lapsing documents.

22.3 Rent

Rent lists rent due and received. Rent invoices are made **automatically each morning** (the number of days before the due date is set by an administrator) or by pressing **Invoice the rent that is ready**. Each invoice goes to the tenant as a customer and is paid in Invoices as usual. A **rent receipt** (PDF, e-mail) is available for every payment.

- **Tenant account statement**: a running account per tenant (PDF, e-mail).
- **Reminders and late fees**: a morning job e-mails the tenant before the due date and when rent is late. An optional **late fee** (a percentage with a cap, or a fixed amount) is invoiced once per rent, on the rent part only.
- **Arrears**: tenants who are behind, with age and amounts.

22.4 Charges (utilities and service charges)

Charges defines **charge types** (fixed monthly or metered, for example water, service charge). Add charges to a lease, enter **meter readings** and one-off charges; they become lines on the tenant's **rent invoice**. The money belongs to the agency: the owner statement counts only the rent part, and late fees are worked out on the rent only. Charges are not taxed.

22.5 Deposits and inspections

Deposits keeps each lease's security deposit as a ledger of movements: *received*, *kept for rent*, *kept for damage or other reasons*, *refunded*, *moved to a renewal*, and voids. Keeping a deposit for unpaid rent settles the rent invoice for real. **Inspections** (move-in and move-out): a room list with conditions, repair costs and sign-off.

22.6 Maintenance

Maintenance logs repair requests with priority, contractor, cost and who pays (owner or agency). Photos and documents can be attached. Repairs the owner pays for appear on the owner's statement, shared by the owners' percentages.

22.7 Owner statements and fee invoices

- **Owner statements**: each month the system prepares a **draft statement** for every owner who had rent or repairs last month, showing rent received, the management fee (and VAT on it), repairs and the **amount to pay the owner**. Review any warnings, then **agree** the statement: it is booked to the accounts and can be e-mailed to the owner (PDF). To change an agreed statement, **reopen** it.
- **Fee invoices**: when a statement is agreed, a numbered **tax invoice for the management fee** is made for the owner (a document only; the statement already books the fee and VAT). It is voided when the statement is reopened and attached to the e-mailed statement.
- Statements can be created automatically from a chosen day each month, and even agreed and e-mailed when they have no warning and the owner is to be paid something (a setting).

22.8 Overview and reports

Overview shows rent collected, arrears, vacancy and leases ending soon. **Reports** (16): rent roll, vacancy, lease expiry, owners, arrears, rent collection, maintenance requests, maintenance cost, owner statements, security deposits, fee invoices, utilities and service charges, rent increases due, monthly trend, repairs by contractor, documents. The owner, tenant and lease lists export to Excel, PDF and CSV.

22.9 Settings (administrator)

Areas, "lease ending soon" days, rent due day, usual management fee % and VAT on it, rent invoicing, owner statements every month, and tenant reminder and late-fee rules.

23 Online Store

The **Online Store** module gives your business a public shop on the internet at `/shop` (for example `https://erp.yourbusiness.com/shop`). When the module is on, `/shop` is also the first page a visitor sees at the main address, with a **Staff Login** link for your own people. Customers choose products, order for **delivery** or **pick-up**, and pay **in cash** or **online** (mobile money or card, when your administrator has set up a payment provider). You answer each order, and an accepted order becomes a normal sale order, invoice and payment, so stock, accounting and reports stay in one place.

The module must be in your licence and activated by an administrator (Settings > Modules). The **Online Store** group then appears in the menu with **Online orders**, **Online payments**, **Returns**, **Reviews**, **Newsletter**, **Send a newsletter**, **Coupons**, **Text messages**, **Shop settings** and **Open the shop**. Staff need the **Operations** area to use them.

23.1 What a visitor sees on the first page

From top to bottom, the first page of the shop shows:

1. an **announcement bar** (a short message, optionally a link);
2. the **header** with the shop name or logo, a **search** box, the cart, **Sign in** and **Staff Login**;
3. the **banner**: your pictures sliding one after the other, with a title, a text and a button;
4. four rows of products you choose: **Featured products**, **Best-selling products**, **Special offers and discounts** and **New arrivals**. Each row slides left and right by itself and by the arrows;
5. **Customer reviews** and the shop's average rating (real reviews only, see below);
6. a **newsletter** sign-up;
7. the **footer** with quick links, contact details, opening hours, an "about" text and links to your social pages;
8. below the rows, **All products** with the category buttons.

A part with nothing to show (no featured product, no review yet, no announcement) is simply left out. When a visitor searches or picks a category, the page goes straight to the matching products.

23.2 Setting up the shop (manager)

Open **Online Store > Shop settings**.

23.2.1 Products on the shop

Search a product and press **Add**. Only products you add here are shown or sold online. For each product you can set:

- **Title on the shop** and **Online price** (leave the price empty to use the normal price; an online price below the normal price shows the normal price crossed out as an offer);
- **Order**: the lower number comes first;
- **Shown**: untick to hide the product for a while;

- the four row ticks **Featured**, **Best seller**, **Offer** and **New**: the shop never picks products by itself, you decide which products appear in each row (up to 8 per row; the first three rows follow the **Order** number, **New arrivals** shows the most recently added first). Press **Save** at the end of the product's card.

The picture is the product's own picture: add one on the product screen. Under every product the screen shows where its stock figure comes from (see *Why does the shop say "Sold out"?* below).

23.2.2 Front page wording

In **Front page** write what the first page says. Everything is optional.

- **Announcement bar** and its **link**; **Banner title**, **Banner text**, **Banner button text** and **Banner button link** (empty = down to the products).
- **Banner pictures**: choose up to **8 pictures** (JPEG, PNG, WebP or GIF, 8 MB each; you can choose several at once). Use the arrows to put them in order and **Remove** to take one away. They slide every few seconds on the shop, and a visitor can use the arrows, the dots, or swipe. A wide picture, about 1600 × 600 pixels, looks best. With no picture the banner is a plain colour.
- **About the shop**, **Contact e-mail** and **Opening hours** for the footer.
- **Footer links** and **Social links**: one per line, written **Label|address**, for example `Delivery|/shop` or `Facebook|https://facebook.com/yourshop`. At most 8 and 6. An address must start with `/` (a page of this site), `https://`, `http://`, `mailto:` or `tel:`; anything else is refused.

Press **Save the front page**, then **Open the shop** to look at it.

23.2.3 Delivery, pick-up and the rest

1. **Delivery areas**: add each area you deliver to, with its **Fee** and an optional **Minimum order**. With no area the shop delivers anywhere for free. With areas, the customer chooses one.
2. **The shop**: choose the **Service product for the delivery fee** (a service product, ideally without tax added on top), set **Delivery**, **Pick-up** and **Pay cash on delivery or at pick-up**, the **Pick-up address**, the **Minimum order**, **Free delivery from** an amount, and **Units kept back for the till** (the shop sells that many fewer than you hold, so the last unit is not sold twice).
3. **Customer accounts**, **Text messages**, **Returns** (how many days after completion a customer may return goods; 0 = no returns through the shop) and **Online payments** are switched on here too. Your administrator sets up the providers (Administrator Manual, chapter 7).
4. Tick **Shop is open to the public** and **Save settings**. Use **Pause orders for now** to stop taking orders without taking the page down; the message you write is shown to visitors.
5. Press **Open the shop** and place a test order before telling customers.

Tip: Prices on the shop include tax. Customers see stock only as *Few left* (5 or fewer) or *Sold out*, never as a number.

23.3 Why does the shop say "Sold out"?

You do **not** need a separate stock for the shop. The shop uses the same stock as the till and the warehouses:

> stock in the **sellable locations** of your warehouses − quantities **reserved** on confirmed sales orders − the shop's **buffer** ("Units kept back for the till", 1 unless you changed it) = what the shop may still sell

The line under each product in **Products on the shop** shows these four numbers. When the last one is 0 or less the shop says *Sold out*. If the line says *Stock is not tracked for this product*, the shop always shows it as available. When a product says sold out and you believe you have stock, look for:

What you see	Usual reason	What to do
The last number is exactly 0 and the first is 1	The buffer of 1	Lower **Units kept back for the till** to 0 in the shop settings
The first number is 0 but the product has stock	The stock sits in a location that is not sellable (*Receiving*, *Damaged*, an inactive location) or was never entered per warehouse	Open **Inventory** and the product's stock; move the goods to a sales location with a stock transfer (see the chapter on Inventory)
The first number is high and the second is high too	The goods are already promised on confirmed sales orders, including accepted online orders	Complete or cancel those orders, or add stock

Stock that arrives on a purchase receipt sits in the *Receiving* location until it is moved to a *Sales* location.

23.4 What the customer does

The customer opens `/shop`, searches or picks a category, adds products to the cart, and presses **Proceed to checkout**. They choose **Delivery** or **Pick-up**, give a name and a phone number (an e-mail address is optional), and for delivery an area and an address. Then they choose how to pay:

- **Cash on delivery** or **Cash at pick-up**. After **Place order** the order reaches you at once.
- **Mobile money** (they type the number to pay from and approve on their phone) or **Card**. After **Place order and pay** the order reaches you only once the payment is **confirmed**.
- A **coupon code** can be typed and checked with **Apply** before ordering (when you have an active coupon).
- When text messages are on, a box offers updates about the order by text (or WhatsApp).

They then see an order **code**. The page `/shop/order/<code>` shows where the order is, lets them cancel it while it is new, **order again**, ask for a **return** or write **reviews** once it is completed. If they gave an e-mail address, they receive a message when the order is received, accepted, on its way or ready, completed or refused.

A customer may also **sign in** (top of the shop): they type their e-mail address (or a saved phone number), receive a one-time code valid for 10 minutes, and then see their orders, keep their details and use **Order again**. No password is needed, and buying as a guest always works.

23.5 Answering orders (staff)

Open **Online Store > Online orders**. The tabs are **New**, **Awaiting payment**, **Open**, **Refunds due**, **Completed**, **Rejected**, **Cancelled** and **Everything**. The **New** tab lists orders waiting for an answer, with their number in brackets and a *late* mark when one has waited too long. The list refreshes by itself, so it can stay open on a counter screen.

- **Accept** creates a confirmed sale order that holds the stock. If the stock does not cover the order, the screen says so and offers **Accept anyway**; the sale order is then over-promised until stock arrives. Phone the customer if you are unsure. An order paid online is already paid: there is no cash to collect.

- **Reject** needs a reason; the customer sees it. An order paid online and rejected shows under **Refunds due**.
- **Mark packed** (optional), then **Out for delivery** for a delivery or **Ready for pick-up** for a pick-up. The customer is told.
- **Complete** when the goods are handed over. This takes the stock out through the sale order, issues the invoice, and records the payment. For a cash order tick **Cash collected** unless the customer has not paid yet; choose **Take stock from** a location if your business uses several warehouses.
- **Cancel order** (accepted but not completed, for example nobody answered the door) cancels the sale order and releases the stock.
- **Awaiting payment** lists orders whose customer has not paid yet. They come to **New** when the payment is confirmed, and are cancelled by themselves after a day. A payment the customer does not approve within **Minutes the customer has to pay** (30 unless changed in the shop settings) expires, and the customer can try again from the order page.

A discount from a coupon is shown on the order (*Coupon … : … off the items*, or *delivery fee waived*). **History** lists every step with who did it and when.

23.6 Refunds of online payments

When a customer who paid online cancels, or you reject the order, the order moves to **Refunds due**. Open it and press **Refund through the provider** to give the money back through the payment provider. If the provider cannot do it, refund by hand outside the program, type the **reference** of your refund and press **I refunded it myself**. Once an order is completed, goods coming back go through **Returns** (below).

23.7 Online payments (report)

Online Store > Online payments lists every online payment for a period, with cards for **Paid**, **In the books**, **Held for open orders**, **Refunds due**, **Refunded**, **To review** and **Failed or expired**. A payment is recorded in the books as a payment on the invoice when the order is completed; until then it is held for the order. Use the filters to see what needs a person:

- **Under review**: money arrived that needs a person, for example a different amount than the order, or a second payment for the same order. Look at it, deal with it (for instance refund the extra), write what you did and press **Mark as dealt with**.
- **Refunds due** (press *Go to the orders to refund it*) and **Stuck pending** (a payment still pending long after it should have closed).

23.8 Online sales reports

Online Store > Sales reports has six reports, each with a from and to date and the usual **Excel** and **PDF** download. They are also in the list of reports you can have e-mailed on a schedule (Reports > Scheduled).

An order counts as a sale on the day it was completed, the day you pressed **Complete** and the invoice was issued, not the day the customer ordered or paid. The money is what the invoice says, so the totals agree with your invoices. Refunds of returns are shown on the day they were refunded.

- **Online sales by day**: for each day, the orders completed, how many were delivery and how many pick-up, goods, coupon discounts, delivery fees, **Invoiced**, returns refunded that day and **Net** (invoiced minus refunded).
- **Online sales orders**: every completed order with its invoice number, **Invoiced**, **Paid** and **Refunded**, so you can check a total order by order.
- **Online sales by payment method**: how those invoices were paid (cash, mobile money, card), and **Not collected yet** for the part of the invoices nobody has paid.
- **Online orders not counted as sales**: orders placed in the period that are not sales: **Open (being handled)**, **Waiting for online payment**, **Never paid (cancelled)**, **Cancelled** and **Rejected**, with their value, what was paid online and what was refunded. Use it to see money that is still waiting or must be given back.
- **Online sales by coupon**: for each coupon the orders, the discount given, the delivery fees waived and the amount invoiced.
- **Online best-selling products**: quantity sold, revenue after coupons, returned quantity and refunds, and the net, best first.

> **Note:** An order whose invoice was voided still shows as an order but with **Invoiced** 0, and a payment on a voided invoice is not counted. The by-day and payment reports are cut at midnight in the time zone of the server.

23.9 Coupons

Online Store > Coupons holds the codes a customer types at checkout. When at least one coupon is active, the shop shows a coupon box.

- A coupon gives **Percent off the items** (with an optional *Never more than* amount), **Amount off the items**, or **Free delivery**.
- Optional limits: **Minimum order**, **Valid from**, **Valid until**, **Orders it can be used on**, and **Once per customer** (the same phone number or account).
- A rejected or cancelled order gives its use back. The discount is part of the sale order and the invoice, so the invoice always equals what the customer paid.
- One coupon per order, and it applies to the whole order, not to one product.

23.10 Returns

A customer can ask to return goods from a **completed** order, within the number of days set in the shop settings (14 unless changed), from their order page. They choose the items and quantities, give a reason and the phone number of the order (not needed when signed in).

1. Open **Online Store > Returns**. The **Waiting** tab lists new requests. Press **Approve** or **Refuse** (a note for the customer is needed to refuse).
2. When the customer has brought the goods back, press **Goods received: put back and refund** (the **To refund** tab), choose where the goods go back in, and give the money back: **Refund through the provider** for an online payment, or the same by hand with its reference; for a cash order the screen says how much cash to hand back.

3. The goods go back into stock through a normal sale order return, so stock, revenue and reports follow. A coupon discount follows the goods (the customer gets back what they paid for them); the **delivery fee is not refunded**.

The customer is e-mailed at each step. Exchanges, store credit and restocking fees are not part of this screen.

23.11 Reviews

A customer whose order is **completed** can review each product of that order from the order page (a rating of 1 to 5 stars and optional words), using the phone number of the order or their account. One review per product per order. Only **real** reviews exist: you cannot add one yourself.

Open **Online Store > Reviews**. A new review is **Waiting**: press **Approve** to show it on the shop, **Hide** to keep it but not show it, or **Delete** to remove it for good. Only approved reviews are shown and counted in the stars of a product and of the shop. The newest approved reviews with words appear on the first page.

23.12 Newsletter

Visitors can ask for your newsletter at the bottom of the first page. The shop sends them an e-mail with a link; they are counted only after they open it. Open **Online Store > Newsletter** to see the list (**Subscribed**, **Not confirmed**, **Unsubscribed**), to **Remove** an address, and to **Download confirmed addresses (CSV)**, with each person's own unsubscribe link, for a mailing tool.

23.12.1 Sending a newsletter

Open **Online Store > Send a newsletter** (also a button on the Newsletter screen) and press **New newsletter**.

1. Type the **Subject** and the **Message**. A blank line starts a new paragraph. The message is plain text: nothing you type is treated as formatting or code. You may add one **button** with its text and a link that starts with `https://` or `/` (for example `/shop`).
2. Choose **Who gets it**: everyone who confirmed, only the English readers, or only the French readers (each person's language is the one they had when they signed up). The number of people is shown.
3. Press **Save draft**, type your own e-mail address and press **Send me a test**. The test looks like the real e-mail and has [TEST] in the subject. Change the draft and test again as often as you like.
4. Press **Send to N people** and confirm. The list is fixed at that moment.

The shop name and **each person's own unsubscribe link** are added at the bottom of every e-mail automatically, in the person's language. The e-mails do not leave all at once: a small batch goes out about every minute, and there is a limit per 24 hours (500 unless your administrator changed it) so your mail server does not block you. Open the newsletter from the list to follow it: a bar and the numbers **Sent**, **Waiting**, **Failed** and **Skipped**. The page updates by itself.

- **Stop sending** stops the rest. What was already sent stays sent, and a stopped newsletter cannot be started again (write a new one).
- **Skipped** are people who unsubscribed (or were removed) after you pressed send but before their turn: they get nothing.
- **Failed** addresses are listed with the reason the mail server gave. After you have fixed the cause (for example the e-mail settings; an address with a typo can only be removed), press **Try the failed ones**

again: only those are tried, nobody gets a second copy. If five e-mails fail one after another, sending pauses and shows the reason; fix it and press **Try the failed ones again**.

- Pressing **Send** twice, or two people pressing it, cannot send a newsletter twice. A sent newsletter stays in the list as a record; only a draft can be changed or deleted.

> **Note:** The newsletter needs the e-mail settings of the business to be working (Administrator Manual, chapter 9), and `app.frontend-url` must be the public address of the site (Administrator Manual, chapter 7), or the unsubscribe links will be wrong. You can still **Download confirmed addresses (CSV)**, with four columns (`email`, `language`, `confirmed_at`, `unsubscribe_link`), if you prefer a mailing tool of your own: put each person's **unsubscribe_link** in every message. A person can also unsubscribe from the page they see right after confirming, and you can **Remove** an address when someone asks.

23.13 Abandoned carts

Many visitors fill a cart and then leave. When your manager switches on **Send reminders for abandoned carts** (Shop settings), the shop can remind the ones who typed an **e-mail address** at checkout.

- **What the customer sees.** Under the e-mail box a short notice says the shop may remind them about their cart by e-mail, and that every e-mail has a link to stop the reminders. Nothing is saved until the customer has typed an address that looks right (guests too: no account is needed).
- **Two reminders, no discount.** The first goes out about **1 hour** after the customer last changed the cart, the second **3 days** after. The e-mail lists the cart as the shop is today (current prices; what is sold out is named as no longer available) with a button **Go back to my cart**. The customer lands on the order form with the cart filled and the e-mail address already typed. The e-mail is in the language the customer was using on the shop.
- **Nobody is pestered.** An address that **orders** is not reminded any more. A link at the bottom of each e-mail (**Stop these reminders**) stops them at once and for good. If the cart changes after a reminder, the address still gets at most two reminders in 7 days. A cart whose items are all gone, or that is more than 2 days old when its first reminder would go out (for example after the server was off), is dropped without an e-mail.
- **Your screen. Online Store > Abandoned carts** shows the numbers (Waiting, Reminded once, Reminded twice, Ordered, Stopped, Nothing to remind) and a list with the e-mail address, the products and pieces, the last change and when each reminder went out. Press a number to filter. **Remove** deletes a cart and its address (for example when a customer asks to be forgotten); an address that pressed **Stop these reminders** is kept as stopped so it is not reminded again, until you remove it. Carts untouched for two months are deleted by themselves.

> **Note:** The reminders need the e-mail settings of the business to be working (Administrator Manual, chapter 9) and `app.frontend-url` set to the public address of the site (chapter 7). They are off until you tick the box, and nothing is saved while they are off.

23.14 Loyalty points

When your manager switches on **Customers earn and spend loyalty points** (Shop settings; it needs Customer accounts to be on), customers who are **signed in** earn points and spend them on later orders. Guests earn

nothing: the points belong to the account. These points are the shop's own and are separate from the loyalty programme at the till (Sales).

- **Earning.** When an order is **completed** the customer earns points on what they paid for the goods: **1 point for every 100** by default (your manager can change it), after any coupon or points discount and without the delivery fee. They are told in the "order complete" e-mail and see them on the order page.
- **Spending.** At checkout a signed-in customer with points sees **Use loyalty points**: they type how many, or press **Use the most I can**. **One point takes 1 off** (1 unit of the shop's currency), and points can pay at most a share of the goods (50% by default) that is left after a coupon. The total shows a **Loyalty points** line. The shop checks the balance again when the order is sent, so the same points can never be spent twice.
- **Their balance.** In the shop's 👤 panel the customer sees the balance and the history (earned, used, returned).
- **Cancelled or refused orders** give the spent points back. **Returned goods** give back the matching share of the points spent on them and take back the matching share of the points they earned; if the customer has already spent those points the balance can go below zero until they earn more (points cannot be spent while it is below zero).
- **Your screen. Online Store > Loyalty points** lists the customer accounts with their points (the most first, with a search box), shows the history of one customer, and lets you **add or remove points** with a reason (for a gift or a correction; the balance cannot go below zero). The order screen shows the points used and earned on each order.
- **In your books.** Points work like a coupon: they lower the price of the order, so the invoice is what the customer really paid and the sales reports show it. Points never expire, and deleting a customer's account deletes their points history.

23.15 Text messages

When your administrator has chosen a text provider, the shop can text customers about their order (only those who ticked the box at checkout), text sign-in codes, and text you about new orders. **Online Store > Text messages** lists every text, also the ones that failed or were not sent, and has a **Send test message** form. There is a daily limit to keep the cost in check.

23.16 Good to know

- Online orders from a phone number that already exists in **Customers** attach to that customer; otherwise a customer is created.
- A customer may have only a few orders waiting for an answer at once, and a script that sends many orders from one connection is slowed down. These limits are in **Shop settings**.
- Not built yet: loyalty points on online orders and abandoned-cart reminders. Newsletters are plain text with one optional button, with no pictures, and cannot be scheduled for later. Online orders also appear in the normal sales reports.

24 Glossary and common questions

24.1 Glossary

Term	Meaning
Online order	An order a customer placed on the public shop at `/shop`. It waits for staff, then becomes a sale order.
Sellable now	What the online shop may still sell of a product: stock in sellable warehouse locations, minus quantities reserved on confirmed sales orders, minus the shop's buffer.
Buffer (Units kept back for the till)	The number of units per product the shop never sells, so the last unit is not sold twice. 1 unless changed.
Coupon	A code a customer types at checkout on the online shop for a percentage or amount off the items, or free delivery.
Webhook	The address a payment provider calls to say a payment was made. The shop also checks pending payments itself.
Register	A physical till.
Session / Shift	One working period on a register, opened with a float and closed with a count.
Float	The cash put in the drawer at the start of a shift.
X report / Z report	A mid-shift snapshot (X) and the closing, numbered report (Z).
Void	Cancelling a document before or instead of correcting it; leaves a trail.
Credit note	A document that reduces what a customer owes, issued when an invoice is voided or cancelled.
Quotation / Sale order / Invoice	An offer / a confirmed order / a request for payment.
Bill	A supplier's invoice to you.
GRN	Goods received note, printed when stock is received.
BOM	Bill of materials: the recipe for a manufactured product.
SKU	Stock keeping unit: a product's own code.
Landed cost	Freight, duty and clearing added to the cost of goods received.
Reorder level	The stock level at which a product should be re-bought.
Warehouse / Location	A place stock is kept, and a shelf or area inside it (Receiving, Sales, Storage, Damaged).
Branch	A business location for reporting: sales, purchases and expenses are tagged with it.
Cost center	A tag (department, project) for cost reporting.
Chart of accounts	The list of accounts the ledger posts to.
Journal entry	A set of debit and credit lines that balance.

Term	Meaning
Approver / Manager PIN	A person with the right to approve; their PIN confirms it at your screen.
Accrual / Depreciation	Recognising a cost when incurred / spreading an asset's cost over its life.
ADR / RevPAR	Average daily rate / revenue per available room (hotels).
SLA	A promised reply or resolution time (Help Desk deadlines).
MRR / Churn	Monthly recurring revenue / share of subscriptions lost (Subscriptions).
Trust account	The account holding a client's money, separate from the firm's (Law firm).

24.2 Common questions

I cannot see a menu item mentioned in this manual. Your business may not use that module, or your role does not include it. Ask your administrator.

I made a mistake on an invoice. If it is still a draft, edit or delete it. If it is issued, void it (or cancel and credit it if payments exist) and create it again.

A sale was refused because of stock. Stock may be low and negative stock is not allowed. Receive or adjust stock first, or ask a manager.

A discount asks for a manager. The discount is above your allowed limit. A manager types their PIN on your screen.

The till shows Offline. Keep selling; sales queue and sync automatically when the connection returns. Do not clear browser data meanwhile.

I forgot my password or PIN. Use *Forgot password?* if your e-mail is on your profile; otherwise ask an administrator. Change your own PIN in **My profile**.

How do I get the numbers out to Excel? Every list and report has **Excel, PDF and CSV** buttons; they export exactly what is on screen, with the same filters.

Who changed this? Ask an administrator to check the **Audit Log**; most important actions are recorded with the person and time.
